Federal Public Policy and Population Health (205645)

Sara Bleich

2020 Spring (2.5 Credits)		**Schedule:**	TR 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	70

Public policies that promote population health by preventing and slowing disease onset are essential and complementary to clinical strategies for the management of disease. Effective public policies can also present alternatives to increased health care spending for maintaining and improving health. To understand how to use public policy as a tool to promote the population's health, knowledge about the key federal actors and their responsibility for addressing public health challenges is essential. So too is familiarity with the menu of available options for public policies and tools for policy analysis.

In this course, students will learn about key actors in the policy making process.Students will then develop basic policy analysis skills; classroom examples will primarily focus on nutrition and obesity. The assignments are designed to allow students to focus on a health policy issue or program of their choice, while applying the skills learned in the class.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH 65 HP, HPM SM1

Wave 2 | MPH45 HM, MPH65 HM

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM

Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM

Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 4: Elective
HSPH: Conditionally Approved	Conditionally Approved Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Health Policy & Management 502 Section: 1

Federal Public Policy and Population Health (205645)

Sara Bleich

2018 Spring (2.5 Credits)		**Schedule:**	TR 1130 AM - 0100 PM
Instructor Permissions:	None	**Enrollment Cap:**	60

Public policies that promote population health by preventing and slowing disease onset are essential and complementary to clinical strategies for the management of disease. Effective public policies can also present alternatives to increased health care spending for maintaining and improving health. To understand how to use public policy as a tool to promote the population's health, knowledge about the key federal actors and their responsibility for addressing public health challenges is essential. So too is familiarity with teh menu of available options for public policies and tools for policy analysis.

For about the first half of the course, students will learn about one key actor in the policy making process through readings, a lecture, and a brief assignment. In the second half of the course, students will develop basic policy analysis skills. The assignments are designed to allow students to focus on a health policy issue ore program of their choice. Discussions of the assignments will provide an opportunity for the class to learn about a variety of health policy issues and programs.

Understanding Public Health Leadership: From Frameworks to Practice (206904)

Howard Koh

2021 Spring (1.25 Credits)		**Schedule:**	MTWR 0200 PM - 0515 PM
			F 0200 PM - 0330 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	32

Understanding public health leadership should represent a dynamic, lifelong process. Among other things, it can involve discovering and applying theories and frameworks, learning from proven and effective real-world leaders, analyzing strategies and skills such leaders have employed, and personal reflection. Of note, theory and science alone are never enough to enable change; effective practitioners must also constantly hone and refine skills. They include improving systems thinking, generating creative options to address pressing problems and guide decision-making, and effectively communicating decisions to motivate change. In this seminar course, students will address these dimensions, among others, as a way to revisit and nourish their own personal concepts of public health leadership for their future careers.
Those accepted to the course will then: 1) learn about a range of modern day leadership frameworks and strategies, 2) study specially-designed leadership case studies about three national public health leaders who tackled complex societal challenges, as well as interact directly with them in the class, and 3) reflect in small groups about lessons learned. In their final essay, students will compare and contrast how the leadership frameworks apply to these national leaders; analyze the effectiveness of their assessment, sensemaking, decision-making and communication strategies; and reflect on how the weeklong class experience affects and changes their own personal views on leadership.

Class Notes: **Enrollment in this course is by application, through the following survey: https://harvard.az1.qualtrics.com/jfe/form/SV_0pnGIsbB1RX1iVn**

To be admitted into this course students must complete this online application consisting of six short-answer questions by November 9, 2020 at 11:59PM EST. Accepted students will be notified of admission by November 10, 2020, close-of-business. Accepted students will then need to submit a course petition and complete all subsequent instructions from the Registrar's Office in order to complete the registration process.

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

Health Care Delivery Reform in the US (206976)

Michael Barnett

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 40

Health care delivery in the US is an enormous, complex, and fragmented system of hospitals, clinics, rehabilitation facilities and other services. The overall purpose of this course is to provide students with a strong foundation of knowledge on the current state of the US health care delivery system and to develop tools to understand and critically evaluate major delivery reforms. This course has three main objectives: (1) illustrate the current state of health care delivery across the spectrum of settings (e.g. hospital, clinic, nursing home) and the major challenges facing this system; (2) develop a deep understanding of important delivery reform initiatives being pursued across the US and critically evaluate their capacity to achieve intended change; and (3) explore the challenges in implementing these delivery reforms.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM

Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM

Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending

no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Health Policy & Management 505 Section: 1

Health Care Delivery Reform in the US (206976)

Michael Barnett

2018 Spring (2.5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 31

Health care delivery in the US is an enormous, complex, and fragmented system of hospitals, clinics, rehabilitation facilities and other services. The overall purpose of this course is to provide students with a strong foundation of knowledge on the current state of the US health care delivery system and to develop tools to understand and critically evaluate major delivery reforms. This course has three main objectives: (1) illustrate the current state of health care delivery across the spectrum of settings (e.g. hospital, clinic, nursing home) and the major challenges facing this system; (2) develop a deep understanding of important delivery reform initiatives being pursued across the US and critically evaluate their capacity to achieve intended change; and (3) explore the challenges in implementing these delivery reforms.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Health Policy & Management 506 Section: 1

Practical Scientific Methods for Improving Health and Heath Care (207025)

Donald Goldmann

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 60

Despite rapid advances in science and translational research, there are enormous gaps between what we know (the evidence from research) and the effectiveness of prevention and care services we provide. Improvement in health and health care outcomes has been agonizingly slow, but increasing global evidence and experience suggest that progress can be accelerated through a scientific approach to quality improvement. The purpose of this on-line course is to provide you with practical, yet rigorous methods and tools for tackling problems and getting results in public health and health care, or, in fact, for achieving credible results in any field where gaps between "knowing and doing" exist.

This course uses engaging videos, personal improvement projects, and interactive assignments to teach the fundamentals of improvement science. We will emphasize a flexible and practical methodology, The Model for Improvement, but will crosswalk this model with other approaches you are likely to encounter, including implementation science, Lean, and Six Sigma. In addition, we will explore how methods from other scientific disciplines can accelerate improvement, especially epidemiology, qualitative and ethnographic methods, program design and evaluation, information science, and behavioral science/behavioral economics. You will practice what you learn by designing, implementing, and evaluating your personal improvement project. Course faculty will offer tips on performing rigorous, publishable projects as part of routine work (including how to differentiate between quality improvement and research that requires approval from institutional human studies review boards). You will practice what you have learned by critiquing published quality improvement studies, including successful and unsuccessful efforts to scale-up promising improvement ideas. We will encourage discussion of the intersection between improvement initiatives and global equity and social justice issues. Faculty and teaching assistants will provide real-time feedback through Canvas.

Enrollment Requirements
Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students and academic year students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission. All academic year students must request instructor permission prior to adding themselves to the waitlist.

Requirements: **Restricted to MPH-EPI and Summer-Only students.**

Practical Scientific Methods for Improving Health and Heath Care (207025)

Donald Goldmann

2020 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 60

You will learn the fundamentals of improvement science. You will learn how to apply practical scientific methods and tools in improvement programs and projects in health and health care – or in other fields where evidence has not been translated into optimal results. The course will emphasize a particularly flexible and practical methodology, The Model for Improvement, but will cross-walk this model with other approaches you are likely to

encounter, including Lean and Lean Six Sigma. In addition, you will benefit by leveraging relevant methods from other scientific disciplines that can accelerate improvement, especially epidemiology, qualitative and ethnographic methods, program design and evaluation, information science, and behavioral science/behavioral economics. You will practice what you learn by designing, implementing, and evaluating personal improvement projects. Since you may wish to present and/or publish your improvement work in the future, course faculty will offer tips on performing rigorous, publishable projects (including obtaining approval from institutional ethics review boards) as part of routine work. You will practice what you have learned by critiquing published quality improvement studies. You will synthesize and apply course fundamentals at the end of the term by examining how system strengthening can help address the challenges and opportunities in global equity and social justice issues. Faculty and teaching assistants will provide real-time feedback through Canvas.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Disability Policy in the U.S. (217836)

Ellen Meara

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

A broad definition of health incorporates the ability to participate in a full range of activities inside and outside the home. What happens when people live with health conditions that impede one' ability to learn, work, or live independently? What policies and programs in the U.S. support the income, health care needs, and civil rights of people living with disability? In what ways do these policies work well and where do they fall short? The goal of the course is to identify major public programs and legislation likely to affect people with disabilities, to help students gain the background to analyze how policy changes have worked well or poorly to serve the needs of people living with disability, and to use this evidencebase to think critically about potential changes to disability policy moving forward. We will examine public programs that provide income support (Social Security Disability Insurance and Supplemental Security Income), health insurance (Medicare and Medicaid), and civil rights protections (Americans with Disabilities Act). We will also consider special populations including people with mental illness or substance use disorders, children, and people who need long term services and supports. Course materials will draw upon journal articles from clinical, health policy, and social science, as well as grey literature. Students will be assessed based on participation, policy memos, a mid-term exam, and a final project focused on state disability policy.

HPM 210 is helpful, but not strictly required.

Introduction to Management of Healthcare Organizations (190621)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

This course provides an introduction to health management with a focus on four of the major tasks confronting managers of health care organizations. After an introduction to management and organizational theory, the course focuses on the main problems of organizational strategy, the management of change and improvement, leadership development, and the management of human resources. This course makes use of case based classroom discussions, on-the-spot problem solving, guest lectures, as well as selected conceptual readings.

Medical Informatics (190622)

David Bates

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 40

Medical Informatics and health information technology are increasingly critical for delivery of safe, effective health care, and also for research, management, and quality and safety improvement. Health information technology will likely transform health care in the coming years, and electronic health records represent a treasure trove of data for anyone interested in clinical effectiveness research, and a vehicle for improving healthcare delivery. In this course we describe the core issues in the field of medical informatics, survey the methods used to perform clinical effectiveness research using clinical systems, give examples of healthcare improvement using health information technology, and describe how to evaluate clinical systems interventions. Major topics include: the impact of clinical systems with a focus on clinical decision support, evaluation methods, obtaining information from clinical systems, and the role of informatics standards. Issues such as confidentiality and privacy, organizational factors, interoperability, and return on investment will also be covered. The relevance of informatics in disease management, genomics, patient computing, biosurveillance, and health care policy will also be highlighted. You do not need to be a programmer or to have medical informatics as a primary interest to take this course; it is targeted at those who want to do clinical research or care improvement.

Course Activities: Students will write a paper about a proposed analysis using data from a clinical information system.

Restricted to HSPH degree or PCE students.

Requirements: **HSPH: HPM512**

Additional Course Attributes:

Attribute	Value(s)

Medical Informatics (190622)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 35

In order to be considered for this course, please submit a one paragraph statement to the instructor, stating your reason(s) for wanting to attend this course.

Medical Informatics and health information technology are increasingly critical for delivery of safe, effective health care, and also for research, and management. Health information technology will likely transform health care in the coming years, and electronic health records represent a treasure trove of data for anyone interested in clinical effectiveness research, and a vehicle for improving healthcare delivery. In this course we describe the core issues in the field of medical informatics, survey the methods used to perform clinical effectiveness research using clinical systems, give examples of healthcare improvement using health information technology, and describe how to evaluate clinical systems interventions. Major topics include: the impact of clinical systems with a focus on clinical decision support, evaluation methods, obtaining information from clinical systems, and the role of informatics standards. Issues such as confidentiality and privacy, organizational factors, interoperability, and return on investment will also be covered. The relevance of informatics in disease management, genomics, patient computing, biosurveillance, and health care policy will also be highlighted. You do not need to be a programmer or to have medical informatics as a primary interest to take this course.

Writing Persuasively About Public Health (205644)

Gregory Harris

2021 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This intensive course in effective writing focuses on the strategies and techniques behind great persuasive writing in topics related to public health. Every element of writing for a general audience will be explored and addressed, as well as every stage of the process, from idea generation to revision. Weekly writing assignments, along with many focused exercises, will hone skills and provide ample opportunity for feedback.

Registration Note: Enrollment in Writing Persuasively About Public Health is by permission of the instructor. To apply, please submit (1) A 200-300 word statement about a topic you wish to write about in public health and why you wish to write about it, (2) a 200-300 word self-evaluation of your strengths and weaknesses as a writer, and (3) a 3-page sample from something you've previously written. This can be an academic paper, an assignment for another class, or something written outside of school. It can be an excerpt from a longer piece. Please submit this to the course instructor via email.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Health Care Quality and Safety (190625)

Jose Figueroa

Bonnie Blanchfield

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 60

The quality and safety of health care is a national concern. This course addresses the conceptual basis for measuring and improving quality and safety, the effectiveness of methods used to improve health care, and the policies that influence the quality and safety of health care. Guest speakers emphasize recent developments and innovative initiatives and policies.

Class Notes:

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | MPH45 HM, MPH 65 HM, HPM SM1

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Organizing Consumer and Community Interests in the Health System (190629)

Susan Sherry

2020 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 33

Using the framework of community organizing, the course examines the elements of building and sustaining constituency involvement in health care. This course focuses on organizing consumer and community interests in the health system with particular emphasis on effective interventions by and for the traditionally disenfranchised. Analysis of health policy and politics is used to identify strategic opportunities and challenges for consumer intervention. The course emphasizes the practical applications of organizing and policy analysis to influence health policy particularly at the institutional, local and state levels. Extensive use of recent case examples ground the class in the current issues faced by community groups and other health interests in a rapidly changing health system.

Homelessness and Health: Lessons from Health Care, Public Health, and Research (217853)

Jill Roncarati

Maggie Sullivan

2021 Spring (1.25 Credits) **Schedule:** F 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 40

Timely action and critical reflection in the areas of poverty, racial/ethnic health inequities, and homelessness are necessary. With more than 500,000 individuals experiencing homelessness in the United States at any given time and approximately 1.4 million individuals relying on emergency shelters over the course of year, homelessness continues to be a significant problem in the United States (US). Recent events such as the COVID-19 pandemic and social uprisings against racial injustices compel public health to better understand the vulnerabilities of our neighbors experiencing homelessness. While homelessness in the US is a complex issue intersecting the fields of health care, public health, and policy, this course will lead students through a concise introduction. We will examine pathways to homelessness, disproportionately affected communities, and unique health care needs including COVID-19. The history of Health Care for the Homeless (HCH) programs and examples of model programs will be discussed. Strategies for incorporating trauma-informed care into practice will be identified. There will be a specific focus on the fundamentals of research in homelessness and health, including innovative directions and ethical considerations. Individuals with lived experience of homelessness, clinicians and practitioners will share their perspectives. Active learning and solution-oriented approaches to challenging and persistent issues for homeless persons will be used.

Health Policy & Management 529 Section: 1

Principles of Suicide Prevention (190635)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

On an average day in the United States 100 people die by suicide; over half use guns. For Americans 40 years of age and younger, suicide is the second leading cause of death.

The search for the causes of suicide has historically focused on identifying mental illnesses that are disproportionately common among suicide decedents. In the three decades since diagnostic psychiatry displaced dynamic psychiatry, hundreds of epidemiologic studies have found strong and consistent evidence that discrete diagnoses of mental illness (e.g., major depression) are associated with an increased risk of suicide. These studies have not, however, explained why some populations have higher suicide rates than others, why male suicide rates are so much higher than female suicide rates in the United States and most other developed countries but not in China, or why rates of suicide are twice as high for white Americans compared to African Americans, children in the United States compared to children in other Western countries, members of the baby-boomer cohort compared to members of the cohort born during the Great Depression, and active duty soldiers today compared to soldiers ten to twenty years ago. These questions, about the distribution and frequency of suicide within and between populations are the kind of questions that a public health approach believes are vital to understanding and preventing suicide -and tries to answer. These are the type of questions that this course will begin to address.

The class will make use of close readings of the empirical literature and, interactive class discussion illustrate the magnitude and scope of suicide as a public health problem, the evidentiary basis (or lack thereof) for existing prevention strategies, and the social and cultural impediments to more effective

interventions.

Instruction is through interactive lectures with a significant amount of class discussion.

Course Note: No previous background in medicine, psychiatry or evaluative sciences is necessary.

Measuring and Analyzing the Outcomes of Health Care (190636)

Marcia Testa

Donald Simonson

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

This course emphasizes introductory concepts, methods, and practical procedures for measuring and analyzing patients' health status, quality of life, satisfaction and cost-effectiveness for health outcomes research. The course reviews the fundamentals of health outcomes research methods necessary for:

1. Demonstrating improvement in patient outcomes

2. Controlling costs and allocating resources

3. Implementing disease management programs and

4. Making effective public health, health technology and clinical decisions.

Statistical methods needed to evaluate and use scales and indices are also presented and discussed. The course would be useful to public health and clinical researchers who must critically review and utilize outcomes data for public health, health care and clinical decision-making. The course should enable students to

1. Conceptually define the meaning and purpose of health outcomes research

2. Understand the role of epidemiology, health economics and database and information technology in conducting outcomes research

3. Evaluate the usefulness and utility of health outcomes measures

4. Recognize the different types of measures used in outcomes research, including clinical, health status, quality-of-life, work/role performance, health care utilization, and patient satisfaction

5. Adopt new methods for modeling patient responses, interpret the meaning of measurement concepts and obtain a basic appreciation of the statistical analyses appropriate for outcomes research

6. Locate available research-quality instruments for measuring health care outcomes in order to make informed choices among existing instruments

7. Interpret the results of health outcomes research

Course Notes: A basic understanding of introductory statistical concepts is recommended.

Leading Change (190642)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 55

Leading change is an organizational growth and enrichment requirement at all levels and types of organizations. Yet, most change is resisted and most change efforts fail. It is said that the currency of leadership is change yet few leaders either study change or consider themselves adept at it. Effective management of change differentiates those who are successful from those who are not. No matter what the work, to be successful requires coming to work every day to not only make the product" but also to make it better.

The course will cover change theory, tools, models and approaches and focuses heavily on their application to contemporary issues and opportunities confronted in health. While historically the focus of change efforts have been on leading change from the top, the orientation of this course will be on leading change from the middle and front lines of organizations. Change and learning will be considered at all levels: environment, organizational system level, micro-organization, and in the experience of care and wellness.

Pharmaceutical Development and Pharmacy Distribution: Markets and Policy (217854)

Troyen Brennan

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 50

The purpose of this course is for students to develop familiarity with the nuances of pharmaceutical development, and the transmission in commerce, economics and public health implications of medications. The course is intended to range over the entire lifespan of a medication—from initial development, through manufacturing, ownership by managed care organizations and into retail pharmacies. Students should expect to have a good grasp of the financial, economic, and public health aspects of the distribution of medications in the United States. The course focuses on the domestic pharma, insurance and retail pharmacy business, but lessons from other counties, in particular Western Europe, will be used to help bring into relief policies pursued in the United States. Two major prisms will be used to examine our system of development and distribution: market incentives and policy optimization. The format is lecture, with use of guest lecturers from academia and industry for particular topics. In particular, the guest lecturers are intended to provide real world views of the topics we discuss and view from an academic point of view.

Health Care Organizations & Organizational Behavior (190644)

Laurie Pascal

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 40

The Institute of Medicine's goal of health care that is safe, effective, patient-centered, efficient, timely, and equitable won't be accomplished primarily through policy reform. Health care organizations individually and collectively must learn to innovate, change, and improve continuously.

Health care organizations are made up of individuals, groups, and teams-their customers, suppliers, and

employees-who make each organization unique. Successfully leading in this context, at any level (executive, manager, frontline worker, or consultant), requires understanding and applying knowledge about how people and groups act in organizations. People and groups interrelate with each other, with the organization, and within the system in which they work. Each of these presents distinctive challenges and constraints.

This course aims to help participants understand health care organizations and organizational behavior through case studies of exemplary organizational challenges, experimental exercises that require students to lead and manage, and through contemporary and seminal literature addressing major theoretical perspectives on organizations. We will examine both macro issues (that impact organizations as a whole) and micro issues (that impact individuals and teams). To develop their abilities to apply the theoretical and practical concepts, students will work together in teams to address a specific organizational problem. Written assignments are designed to allow students to reflect on and apply lessons drawn from their own experience in organizations.

Registration Note: Priority given to HPM students (MPH-HM, MPH-HP, HPM SM1) and DrPH students.

Class Notes:

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | DrPH

Wave 2 | MPH 45/65 HM

Wave 3 | All HPM Students

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Health care organizations are made up of individuals, groups, and teams-their customers, suppliers, and employees-who make each organization unique. Successfully leading in this context, at any level (executive, manager, frontline worker, or consultant), requires understanding and applying knowledge about how people and groups act in organizations. People and groups interrelate with each other, with the organization, and within the system in which they work. Each of these presents distinctive challenges and constraints.

This course aims to help participants understand health care organizations and organizational behavior through case studies of exemplary organizational challenges, experimental exercises that require students to lead and manage, and through contemporary and seminal literature addressing major theoretical perspectives on organizations. We will examine both macro issues (that impact organizations as a whole) and micro issues (that impact individuals and teams). To develop their abilities to apply the theoretical and practical concepts, students will work together in teams to address a specific organizational problem. Written assignments are designed to allow students to reflect on and apply lessons drawn from their own experience in organizations.

Registration Note: Priority given to HPM students (MPH-HM, MPH-HP, HPM SM1)

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | DRPH, MPH65 HMGT

Wave 2 | HPM Students & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Wave 2 | 08/28/2019 12:00AM – 08/29/2019 11:59PM

Wave 3 | 08/30/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Health Policy & Management 543 Section: 1

Quantitative Methods for Policy Evaluation (190648)

Vilsa Curto

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 45

This course will give students the tools that they need to evaluate policy interventions, social programs, and health initiatives. Did the program achieve its goals? Did it reach its target audience? Could it have been more effective? In order to answer these questions, students will develop a flexible set of analytical tools, including both the ability to design an evaluation study and the ability to evaluate existing studies critically.

By the end of the course students will be able to construct a well-designed study to answer well-posed questions, gauge the adequacy of available data, implement an econometric analysis, interpret the results of such studies, and draw policy implications. The course will focus on health policies and programs such as public insurance expansions and public health campaigns, but the techniques will be broadly applicable to other realms such as welfare or education.

Course Note: The material in this course is inherently quantitative, and builds on a base of statistics fundamentals. The prerequisite is a course in basic statistics and probability, such as BIO 200, BST 201, BST 202/203, ID 538, ID201 or equivalent. This includes knowledge of confidence intervals and hypothesis testing. It also includes familiarity with the statistical package of your choice- ideally STATA, but SAS or SPSS are fine. During the course students will be given data sets to analyze, but there will be no instruction on the mechanics of opening and manipulating the data with a statistical software package. Students should contact instructor if they are uncertain about whether they have adequate preparation for the class.

Prerequisites: BIO200 or BST201 or BST202&203, or BST206&(207 or 208) or ID538 or ID201 or equivalent. Concurrent enrollment is allowed.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Nancy Beaulieu

2017 Spring (2.5 Credits) **Schedule:** MW 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 45

This course will give students the tools that they need to evaluate policy interventions, social programs, and health initiatives. Did the program achieve its goals? Did it reach its target audience? Could it have been more effective? In order to answer these questions, students will develop a flexible set of analytical tools, including both the ability to design an evaluation study and the ability to evaluate existing studies critically.

By the end of the course students will be able to construct a well-designed study to answer well-posed questions, gauge the adequacy of available data, implement an econometric analysis, interpret the results of such studies, and draw policy implications. The course will focus on health policies and programs such as public insurance expansions and public health campaigns, but the techniques will be broadly applicable to other realms such as welfare or education.

Course Note:The material in this course is inherently quantitative, and builds on a base of statistics fundamentals. The prerequisite is a course in basic statistics and probability, such as BIO 200, BST 201, BIO 202/203, ID 538, ID201 or equivalent. This includes knowledge of confidence intervals and hypothesis testing. It also includes familiarity with the statistical package of your choice- ideally STATA, but SAS or SPSS are fine. During the course students will be given data sets to analyze, but there will be no instruction on the mechanics of opening and manipulating the data with a statistical software package. Students should contact instructor if they are uncertain about whether they have adequate preparation for the class.

Prerequisites: BIO200 or BIO/BST201 or BIO/BST202&203, or BIO/BST206&(207 or 208 or 209) or ID538 or ID201 or equivalent. Concurrent enrollment is allowed.

Requirements: **HSPH: HPM543**

The Law and Clinical Medicine (190649)

Allen Kachalia

2018 Spring (1.25 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 35

This course will examine what impact health policy and law has on the quality of health care. The course will examine the legal system's evaulation and treatment of quality and safety of health care and how it has--or has not--inspired change and innovation within the medical profession. Topics will include: medical malpractice law, new programs created by the Accountable Care Act, and new innovations from within the clinical profession. In addition, students will analyze and interpret some legal dilemmas created by new developments in medical care that can outpace the laws. Students will have the opportunity to describe challenges in the delivery of high quality care, examine why they occur, and formulate policy approaches that might solve them.

Registration Note: Priority goes to MPH45-HP students

Course Note: The course will meet Tuesdays and Thursdays for a total of eight (8) sessions over eight (8) weeks.

Requirements: **HSPH: HSPH Degr + PHD Stu**

The Law and Clinical Medicine (190649)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 35

This course will examine the legal contours of the physician-patient relationship, including the legal ramifications of medical error. What are a health care provider's legal obligations to a patient? What is medical malpractice and is the medical malpractice crisis real? The course will also examine what impact the law has on quality of care. How has the legal system's treatment of quality of health care services inspired change and innovation within the medical profession? These and other topics will be considered.

This course will describe many of the fundamental legal issues that arise in medical practice, examine why they occur, and formulate policy approaches that might solve them. In addition, students will analyze and interpret the legal dilemmas created by new developments in medical care that can outpace the laws. Students will also propose possible solutions for these challenges. Finally, this course will enable students to critique and design potential options for malpractice and legal reform that can spur the improvement of health care quality and delivery.

Health Policy & Management 545 Section: 1

Economics of Health Care: Public vs. Market Resolutions (190650)

Tim Layton

2021 Spring (2.5 Credits)		**Schedule:**	MW 0945 AM - 1100 AM
Instructor Permissions:	None	**Enrollment Cap:**	120

The objective of this course is to learn how to think about the major issues facing the federal and state governments as they consider how best to regulate the U.S. health care system, using an applied economics framework. In particular, the goal is for students to be able to articulate which issues require government intervention to be resolved, which problems can be resolved by private markets, and why. The course builds on introductory microeconomics and focuses on real-world examples of market failures, government policy options, and unintended consequences of public policy interventions. Among the issues we will examine in the course are: how to finance health insurance; appropriate use of risk adjustment and other strategies to manage the insurance risk pool; approaches to cost-sharing by patients; subsidies for insurance purchase; the effects of individual and employer mandates for insurance coverage; and approaches to managing health care spending. These issues all involve choices about the extent to which markets can resolve the issues and what types of government policies would help the markets work more efficiently and/or more fairly.

Course Prerequisite(s): HPM206, GHP 230, or permission of instructor if you have previously completed an alternative course in microeconomics. For the latter option, please submit by email to

a copy or link to the course syllabus of the class you took previously, as well as documentation of your grade in the course.
Registration Note: Priority given to HPM students (MPH-HP, MPH-HM, HPM-SM1)

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HM, MPH65 HM, MPH45 HP, MPH65 HP, HPM SM1

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: HPM206**

Health Care Issues: Public vs. Market Resolutions (190650)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 48

The objective of this course is to learn how to think about the major issues facing the federal and state governments as they debate and devise plans implementing the Patient Protection and Affordable Care Act. In particular, the goal is for students to be able to articulate why any of the issues requires public policies to be resolved or is a problem that the private market can resolve. (Thus, the course builds off what the students learned in a microeconomics course ?? reasons that markets fail to be efficient and rationales for government involvement in markets.) The issues that will be the focus of the course this year relate to health insurance coverage and control of health care spending. Even if health care reforms are enacted this fall by Congress, the implementation of these reforms will involve the issues to be examined in the course: how to finance health insurance, appropriate risk adjustments to premiums, copayments and cost-sharing by patients, determination of minimum credible benefits package, subsidies for insurance purchase, requirement that people have coverage, efficient size of insurance pool, why slowing the growth in health care spending is really a problem of how to achieve efficient production and consumption of health care and options for achieving such efficiencies (including accountable care organizations). These issues all involve choices about the extent to which markets can resolve the issues and what types of government policies would help the markets work more efficiently and fairly or are necessary because the markets fail to achieve efficient or desired outcomes. Thus, the primary learning objective for students is to understand the complexities of these issues, why markets alone do not seem to resolve them, and how they inter-relate.

Health Policy Issues Facing Aging Populations (190651)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 39

The objective of this course is to understand the major health policy issues facing the U.S. (and other countries) as its population ages and to think through the types of public policies that could be implemented to help the elderly with their health care needs. Specific issues that will be explored include demographic changes coming and how that will affect the country??s ability to fund social insurance and programs, options for altering the financing and structuring Medicare and Medicaid, long-term care, how we determine what is cost-effective care, patient autonomy and who can make decisions about end-of-life care, and health care workforce needs as the population ages.

2021 Spring (1.25 Credits) **Schedule:** F 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 90

This course meets the NIH training requirement for all trainees, fellows, participants, and scholars receiving support through any NIH training, career development award, research education grant, or dissertation research grant. It describes basic ethical and regulatory requirements for conducting research. Topics include ethical issues in biomedical and public health research; regulations and guidelines governing research involving human as well as live vertebrate animal subjects; financial and non-financial conflict of interest; responsible authorship and publication; peer review; ownership of data and biological samples; grant writing; budgeting and adequate allocation of resources; mentor-mentee relationship and their responsibilities; data acquisition, selection and management; sharing of research results; intellectual property; safe laboratory practice, mistakes and negligence; research misconduct and responding to suspected research/professional misconduct.

Course Note: HSPH Graduate students, post-doc fellows, and HSPH junior faculty members will be allowed to take the course without paying tuition, but are expected to attend all lectures, participate in class discussions and complete homework assignments.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Intellectual Property Law and Health Technologies (190654)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

This course will examine the role and impact of intellectual property law, particularly patent law, on innovation in health technologies. It will provide a basic understanding of the purpose of intellectual property rights, requirements for obtaining a patent, and effects of intellectual property law on the quality, affordability and availability of pharmaceuticals and other health technologies. It will also explore cutting-edge legal and ethical dilemmas created by intellectual property, such as whether genes and medical procedures should be patentable and how inventors' interests should be balanced with the public's need to access the technology. The course has a U.S. focus but will examine some issues in international patent law. No legal background is required.

Health Policy and Leadership (190656)

Theodore Strickland

2018 Spring (1.25 Credits) **Schedule:** R 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 50

The Richard L. and Ronay A. Menschel Senior Leadership Fellows Program offers a rare opportunity for those who have recently served in senior top-level positions in government, multilateral institutions, and non-profit organizations to spend three months at the Harvard T.H. Chan School of Public Health to share leadership vision and experiences, by mentoring and teaching of students who aspire to take on similar roles. These courses, taught by a Senior Leadership Fellow, will focus on various leadership challenges in areas such as, politics and public health; health equity; policy implementation; poverty and access to health care, and universal health coverage. Each course is unique and reflects the individual fellow's career and leadership experiences.

Topic: **Behavioral Health Challenges**

Class Notes: **This course compares the policy and political processes of government at the state and federal levels, using relevant mental health topics as case studies. By means of lectures, readings, and**

discussion, we will examine lessons in leadership and bipartisan negotiation amid economic recession and divided government. This class should be helpful to anyone who is interested in the evolution and development of mental health, substance use, and gun policies. Additionally, students will be encouraged to explore the opportunities and benefits of political leadership and policy advocacy as part of their professional development.

Health Policy and Leadership (190656)

Peter Shumlin

2019 Fall (1.25 Credits) **Schedule:** R 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 32

Sponsored by the Harvard Chan Senior Leadership Fellows Program, each offering of this course series is taught by the Senior Leadership Fellow in residence for that term. Each course is unique and reflects the individual Fellow's career and leadership experience. Fellows address a wide variety of leadership challenges in areas such as politics and public health, health equity, policy implementation, poverty and access to healthcare, community health, universal health coverage, and beyond. For more on Senior Leadership Fellow courses and the current offerings, visit hsph.me/SLFPcourses

Health Policy and Leadership (190656)

Tessa Jowell

2016 Fall (1.25 Credits) **Schedule:** R 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 32

The Richard L. and Ronay A. Menschel Senior Leadership Fellows Program offers a rare opportunity for those who have recently served in senior top-level positions in government, multilateral institutions, and non-profit organizations to spend three months at the Harvard T.H. Chan School of Public Health to share leadership vision and experiences, by mentoring and teaching of students who aspire to take on similar roles. These courses, taught by a Senior Leadership Fellow, will focus on various leadership challenges in areas such as, politics and public health; health equity; policy implementation; poverty and access to health care, and universal health coverage. Each course is unique and reflects the individual fellow's career and leadership experiences.

2014 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 32

HPM552 Section 1 with Jim Doyle
This course is designed to give students a first-person look at public health leadership and decision-making from the perspective of a highly successful and effective public health practitioner who is a Senior Leadership Fellow in HSPH??s Division of Policy Translation and Leadership Development. The specific content and structure of each seminar is designed and shaped based on the background and experience of the Senior Leadership Fellow who is leading the seminar, with the participation and guidance of Dr. Robert Blendon, the head of the Division. A major emphasis in each seminar will be the role and use of evidence in public health decision-making, and the pragmatic problems and challenges of having a prominent leadership role in public health.

HPM552 Section 2 with Mark Smith
This course examines the many roles of health foundations in health care practice, policy development and implementation, and will discuss their capacity for change. Students will gain an understanding of the tools of philanthropy and the challenges and opportunities foundations face in pursuing their missions. These insights will be useful for those entering a wide variety of careers in health where foundations are an important part of the professional landscape, including government, not-for-profit, academia, and the private sector. The course will be taught by Dr. Mark Smith, the founding President & CEO of the California HealthCare Foundation, who pioneered numerous initiatives during his 16 years at the helm of the Oakland-based philanthropy. In addition to Dr. Smith?ÇÖs lectures, students will hear from high-profile leaders who play different functional roles in a variety of health foundations, giving them first-hand accounts of the range of foundational involvement in health care and how those organizations fit into the fabric of our health system.

Leadership in Public Health: From Theory to Action (190658)

Michael McCormack

Fawn Phelps

2017 Spring (2.5 Credits) **Schedule:** MW 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 27

Public health and the health care industry are in an era of increasingly rapid change and growing complexity. New policy development, rapid advances in research and science, new technology and social media, growing community activism and steep budget cuts call for breakthrough thinking and new leadership skills.

Now more than ever, public health practitioners need to develop leadership skills that enable them to work across programmatic and systematic "silos" while engaging and working with policy-makers, diverse communities, funders, and other key stakeholders. Innovative ways to lead and apply models of public health are required, and translating classroom learning to "hands-on" practice is crucial.

Working with an external organization, this course sets out to help students develop leadership skills that will enable them to foster and implement cross-sectoral collaborations while challenging students' perceptions of leadership for the 21st century. The course will focus on three key areas of skill development: 1) working effectively in teams, 2) action-oriented cross-sectoral collaboration, and 3) working with diverse populations.

Registration Note: Priority given to HPM students (MPH-HP, MPH-HM, HPM-SM1)

Management Science for a New Era (214567)

Michaela Kerrissey

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 35

The past decade has brought increasing dynamism, complexity and growth in health organizations, from integrated care delivery systems to multi-service nonprofits. The conditions that characterize these work settings – fast pace, high stakes, interdependence, uncertainty – make management ever more critical to performance. But what makes for a great manager in these dynamic settings? What is the manager's role? How can you organize for tight execution while fostering innovation, achieve influence when your authority is limited, and treat people respectfully without burning yourself out?

This course is about how managers get things done and achieve lasting results in the increasingly complex and dynamic world of health and health care. It applies multiple facets of management science to address central organizational challenges that managers face today, such as enabling work across siloes and organizing to ensure consistency without limiting innovation. It is thus a management course, not an economics or policy course. It focuses on the skills and practical frameworks that help people thrive and lead as they rise from individual contributors to managers of people and systems. Students will learn analytic frameworks to identify and assess critical issues facing today's managers and will sharpen the problem-solving and communication skills that are vital to managing in dynamic environments. This class is taught primarily through interactive case studies from real organizations, which expose students to a variety of managerial concepts and help them to develop general management acumen.

This course is relevant for anyone who intends to manage projects and lead teams in their career - whether in health care delivery, consulting, nonprofits, government, or elsewhere. For health organizations to thrive in this new era, adaptive and influential managers are required. This course will help students develop the managerial skills and perspectives to transform their organizations and make a difference in health.

Class Notes:

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

Race and the State: The Role of Public Policy in U.S. Racial Inequality (217877)

Desmond Ang

2021 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 10

This course examines the causes and consequences of racial inequality across a range of domains - from education and criminal justice to labor markets and civic and social engagement. While providing students with an economic toolkit for understanding and discussing discrimination, this course also draws on work in sociology and social psychology to shed light on the real-world ramifications of racial inequality in America. Throughout the course, students will engage in critical evaluation of the impacts that public policies – both current and historical - have on marginalized communities. Example topics include: 1) the social costs of police violence in minority neighborhoods, 2) the consequences of "ban the box" measures on discrimination in hiring, and 3) the role of civil rights policies in minority representation and racial polarization.

Leadership in Public Health: Personal Mastery (190660)

Fawn Phelps

Michael McCormack

2016 Summer (2.5 Credits) **Schedule:** MWF 0900 AM - 1200 PM
MW 0130 PM - 0400 PM

Instructor Permissions: None **Enrollment Cap:** 27

The landscape of public health is deeply complex and rapidly changing. Public health leaders understand systemic problems, set new directions, lead change and learn quickly from mistakes. Public health leaders connect with and inspire others to join them in addressing the most intractable population health challenges. The transformational public health leader develops this capacity through an ongoing cycle of study, introspection and application.

Leadership development often requires the expansion or altering of a person?ÇÖs perception of self and of others. A person can change how they view themselves and how they view and engage with others through intensive personal and group experiences with time for reflection and learning. In this foundation course, you will:

1. Develop a greater understanding of yourself as a leader and a learner, including your strengths, preferences, growth edges, blind spots and limitations, which if not identified and addressed are likely to undermine your leadership and personal effectiveness. You will further develop your ability to overcome your gaps and manage your limitations;
2. Further grow your ability to understand, engage, and effectively support and challenge others, including your DrPH colleagues; and,
3. Deepen your understanding and application of narrative and dialogue to build community and to call a community to action.

Course Note: Course is restricted to DrPH students in the 1st year.

Course Location: Room 200 or Offsite

Leadership in Public Health: Personal Mastery (190660)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 27

The landscape of public health is deeply complex and rapidly changing. Public health leaders understand systemic problems, set new directions, lead change and learn quickly from mistakes. Public health leaders connect with and inspire others to join them in addressing the most intractable population health challenges. The transformational public health leader develops this capacity through an ongoing cycle of study, introspection and application.

Leadership development often requires the expansion or altering of a person?ÇÖs perception of self and of others. A person can change how they view themselves and how they view and engage with others through intensive personal and group experiences with time for reflection and learning. In this foundation course, you will:

1. Develop a greater understanding of yourself as a leader and a learner, including your strengths, preferences, growth edges, blind spots and limitations, which if not identified and addressed are likely to undermine your leadership and personal effectiveness. You will further develop your ability to overcome your gaps and manage your limitations;
2. Further grow your ability to understand, engage, and effectively support and challenge others, including your DrPH colleagues; and,
3. Deepen your understanding and application of narrative and dialogue to build community and to call a community to action.

Course Note: Course is restricted to DrPH students in the 1st year.

Course Location: Still Harbor Center for Discernment & Action | 666 Dorchester Avenue, South Boston, MA (Andrew Sq. T Stop)

Introduction to Qualitative Research Methods for Public Health (212940)

Emma-Louise Aveling

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 25

This online course will provide an introduction to qualitative methods in public health research. It is aimed at students who have little or no prior knowledge of qualitative research methods, and an interest in using or conducting qualitative research to inform health policy and practice. The course is designed to introduce students to fundamental questions, principles, and skills necessary to critically design, conduct, interpret and evaluate qualitative research. Throughout the course, the emphasis will be on gaining and reflecting on practical experience of designing qualitative research projects and using core qualitative methods.

We begin by considering the question "why qualitative research?" reflecting on the philosophical foundations of qualitative approaches and considering the value of qualitative methodologies for health research. We explore the implications for designing and evaluating qualitative research projects, taking account of ethical considerations and the practical constraints of conducting research in diverse applied settings. The remaining sessions focus on developing practical skills for conducting qualitative research: generating data through interviews, focus groups, and observations, and analyzing qualitative data. Students will have opportunities to design and plan qualitative studies, to conduct and evaluate interviews, and to practice analyzing qualitative data. As an introductory level course, it necessarily aims to cover a breadth of topics; it does not, therefore, provide in-depth or advanced coverage of any one aspect of qualitative data collection or analysis.

Registration Note: **Priority goes to MPH-EPI, DrPH and PCE students.**

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Happy Cities: A New Model for Designing New Urban Areas (214577)

Patrick Whitney

Andre Nogueira

2020 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

The Happy Cities is a winter section graduate-level course with a total of maximum 15 students with multidisciplinary background. The course is composed of 10 sessions extended during a total period of 2 weeks from January 6th to January 17th, 2020. Through a collaboration between the D-LAB and Magnolia Quality Development Corporation Limited (MQDC), an international company that invests in research-oriented property development, this course will focus on the application of design methods and frameworks to identify short and long term forces of changes in the health urban environments.

Loneliness and Public Health (215109)

Jeremy Nobel

2021 Spring (1.25 Credits) **Schedule:** TWRF 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 16

The course will have two major components: an intensive didactic learning curriculum composed of lecture, assigned readings, and discussion, and an experiential team-based collaborative project.

For the didactic portion, students will learn the 'ins and outs' of loneliness within the public health landscape, as well as key tools and a framework for developing successful public health interventions. Class disscussions will also cover loneliness as it relates to the current COVID-19 pandemic and its effect on at-risk populations.

Required and optional readings will be assigned before class. Lectures will be followed by a systematic and engaged unpacking of the material in interactive discussion.

In the collaborative project component of the course, students will form into teams and develop their own effective, scalable and sustainable public health interventions designed to tackle loneliness, with a key emphasis on identifying and eliminating barriers to success and developing a measurement models to assess benefit. The group project will culminate in an oral presentation on the final day of class, and the delivery of a written report.

Artificial Intelligence in Health (217481)

Deborah DiSanzo Eldracher

2021 Spring (2.5 Credits) **Schedule:** F 0800 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

Artificial Intelligence (AI) is here, now. It surrounds us. AI is used in every internet search, every conversation with a personal assistant, every credit transaction, and every social media post. A person cannot move through her/his day without knowingly or unknowingly encountering artificial intelligence. AI can be incredibly helpful to our everyday living, and there are also risks and limitations to AI.

For decades, health care lagged behind other industries in its use and investment in information technology. However, today, 96% of non-federal acute care hospitals have certified electronic health records, enterprise imaging system are ubiquitous, patients are using every kind of wearable to track and manage their health, telehealth has become prevalent, and artificial intelligence applications in health care are some of the most advanced in any market. COVID-19 is further accelerating machine learning in patient monitoring, telehealth, and life sciences.

Every health system, payer, health tech company, pharmaceutical company, biotech, health start-up is investigating, piloting, or using AI to research, develop, and advance the state of health and health care.

AI is a ubiquitous assistant in the ICU; it is being used as a physician assistant in oncology, radiology, and the operating room. It is being used to help diagnose diabetic retinopathy, lung cancer, brain bleeds, and soon, breast cancer. Algorithms are used to reduce costs of self-insured employers, to help in drug discovery, and to power clinical trials.

It is important for public health students to have a working knowledge of the possibilities of AI. What is possible? What is not possible? Where can AI help public health, and where should we be cautious?

Students will have an overview of artificial intelligence -- its history, and the progression of machine learning, natural language processing, and neural networks. We will discuss the history of AI in health care technology, understand where the research is now, what applications are available now, and we will hear from thought leaders on the future of AI in health.

We will look at what has worked, what has not worked, and what experts believe will make AI work better. The focus of this class will be how can we make artificial intelligence work for public health.

Health Policy & Management 965F Section: 1

Practice and Culminating Experience for Health Policy (MPH65) (208096)

Nancy Turnbull

2020 Fall (1.25 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 30

This is the practicum and culminating experience for students in the MPH65 program in health policy. Students take this course in the first spring and the second fall of their program for a total of 2.5 credits (1.25 in the spring and 1.25 in the following fall).

This course allows students to integrate and synthesize the knowledge and skills they are gaining from their coursework, and to apply them to a real world health policy issue or problem.

In the spring section, students will explore practicum opportunities and decide on a placement for the summer. Working with the course instructor and their summer preceptor, they will develop a project plan and learning objectives for the summer. Students will also enhance the skills they need to function in a

professional public health setting, including gaining a better understanding of their work preferences and strengths, learning about the practice of health policy from experienced practitioners, including Harvard Chan alumni, and engaging in professional self-assessment and critical reflection.

In the fall section, students will share their summer practicum experience with peers and learn from the experiences of others at an MPH65 practicum poster session. They will also assess their progress on attaining the MPH65 health policy program competencies, and develop a professional development plan.

Course Note: Open only to students in the MPH65 program in health policy, who are required to register for HPM 965F/S. The class meets approximately 8 times in the spring and 6-7 times in the fall. Fieldwork takes place for 8 weeks during the summer, and students will present the results of their summer practicum projects in the fall section of the course.

Requirements: **Course Restricted to MPH-65 HP students**

Health Policy & Management 965S Section: 1

Practice and Culminating Experience for Health Policy (MPH65) (208097)

Nancy Turnbull

2019 Spring (1.25 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 20

This is the practicum and culminating experience for students in the MPH65 program in health policy. Students take this course in the first spring and the second fall of their program for a total of 2.5 credits (1.25 in the spring and 1.25 in the following fall).

This course allows students to integrate and synthesize the knowledge and skills they are gaining from their coursework, and to apply them to a real world health policy issue or problem.

In the spring section, students will explore practicum opportunities and decide on a placement for the summer. Working with the course instructor and their summer preceptor, they will develop a project plan and learning objectives for the summer. Students will also enhance the skills they need to function in a professional public health setting, including gaining a better understanding of their work preferences and strengths, learning about the practice of health policy from experienced practitioners, including Harvard

Chan alumni, and engaging in professional self-assessment and critical reflection.

In the fall section, students will share their summer practicum experience with peers and learn from the experiences of others at an MPH65 practicum poster session. They will also assess their progress on attaining the MPH65 health policy program competencies, and develop a professional development plan.

Course Note: Open only to students in the MPH65 program in health policy, who are required to register for HPM965F/S. The class meets approximately 8 times in the spring and 6-7 times in the fall. Fieldwork takes place for 8 weeks during the summer, and students will present the results of their summer practicum projects in the fall section of the course.

Applied Practice Experience for Health Management (215718)

Louise Keogh Weed

2020 Fall (1.25 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 62

Students in the Master of Public Health degree must complete an Applied Practice Experience ("Practicum"). To aid in the completion of this required, students must complete this is a two part course. The first portion occurs in the spring (HPM 966S) and will include students from multiple fields of study. The latter fall portion of the course (HPM 966F) will be limited Health Management students and content relevant to this field of study.

The current spring course is required of students in the MPH-65 degree program and is designed to:

1) assist you in identifying and completing a field-based practicum experience that will be of value to your professional development;

2) provide tools and insights that will be useful in future professional public health practice; and 3) share field experience with your MPH colleagues via a "peer-to-peer" joint learning experience. In preparation for individual field-based projects, students will develop their skills in performing effectively on interprofessional teams, by working with a client organization in the business sector to address a real

world health problem.

Marketing in the digital landscape calls for a variety of challenges as consumer digital adoption, technology, emerging competitors and data integration changes rapidly. This class prepares students to be effective marketing leaders in landscapes that require focused resource allocation that integrate digital and physical services, and equips them to make strategic decisions in preparing and approving customer centered initiatives. Students will gain a working knowledge of the marketing landscape based on quantifiable addressable market, differentiation, brand strength, customer centricity and targeted engagement through product, place / channel, pricing and promotion in competitive markets. Students will use cases and a team based project learn to critically assess marketing plans and evaluate a range of approaches and methods to measure value driven offerings. Plan on fast-paced case discussions and hands-on group project work.

Managing Information in Health Care (190482)

Deborah DiSanzo Eldracher

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0830 AM - 1000 AM

Instructor Permissions: None **Enrollment Cap:** 32

This course will expose students to the concepts and knowledge involved in making strategic use of information technology (IT) in health care organizations. It will clarify how to establish IT linkages to business, planning, and governance. In addition, it will introduce students to technology management through the analysis of the lifecycle of IT, systems integration, operational improvement through technology, and standards. The course focuses on a broad view and awareness to manage a technology portfolio as a leader in a provider organization.

Course Restricted: HCM students only

Class Notes: **Class meeting dates and times communicated by the department.**

2021 Spring (2.25 Credits)

Schedule: F 0200 PM - 0259 PM
S 0500 PM - 0630 PM
F 0200 PM - 0515 PM

Instructor Permissions: None

Enrollment Cap: 32

The Practicum provides students with an opportunity to integrate and apply the knowledge and leadership skills gained throughout the MHCM program by completing a comprehensive, independent project of their own choosing during the academic year. Students' self-selected projects might entail transforming an existing situation within their existing organizations or developing a business plan for a completely new, innovative initiative. Students will propose a project, develop a project plan, and build the business case to win approval and implement the idea.

Course Restricted: HCM students only

Social and Behavioral Determinants of Health (190486)

Monica Wang

2017 Summer (2.5 Credits) **Schedule:** TR 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 30

The aim of this course is to provide students with a foundation in the core concepts of the social and behavioral determinants of health. This course analyzes major social variables that affect population patterns in health and health behavior, including socioeconomic status, race/ethnicity, neighborhoods, work, and social relationships. Through a combination of online and in-class seminars, students will examine the potential role of various social, policy, and environmental interventions in improving health. Building upon the empirical and theoretical literature covered in the online content and selected readings,

students will discuss models for advancing public health using case-based methodology.
Course Activities: Short written assignments, class discussion (online and in-person), final project.
Course Restriction: HCM Students only

Requirements: **HSPH: HCM708**

Enrollment Cap: 30

The Institute of Medicine's goal of health care that is safe, effective, patient-centered, efficient, timely, and equitable won't be accomplished primarily through policy reform. Health care organizations individually and collectively must learn to innovate, change, and improve continuously.

Health care organizations are made up of individuals, groups, and teams--their customers, suppliers, and employees--who make each organization unique. Successfully leading as a manager in this context requires understanding and applying knowledge about how people and groups act in organizations. People and groups interrelate with each other, with the organization, and within the system in which they work; and the health care system presents distinctive challenges and constraints.

This course aims to help health care managers understand organizations and organizational behavior through discussion of case studies of organizational challenges, hands-on exercises, and contemporary and seminal literature addressing major theoretical perspectives on organizations. We will examine both macro issues (that impact organizations as a whole) and micro issues (that impact individuals and teams). Written assignments are designed to allow students to reflect on and apply lessons drawn from personal experience in organizations.

People and groups interrelate with each other, with the organization, and within the system in which they work; and the health care system presents distinctive challenges and constraints.

This course aims to help health care managers understand organizations and organizational behavior through discussion of case studies of organizational challenges, hands-on exercises, and contemporary and seminal literature addressing major theoretical perspectives on organizations. We will examine both macro issues (that impact organizations as a whole) and micro issues (that impact individuals and teams). Written assignments are designed to allow students to reflect on and apply lessons drawn from personal experience in organizations.

HCM 712: Transitioning to Physician Leadership

This course focuses on the unique nature of physician leadership and the characteristics, methods and skills that are most practical and relevant to successful leadership. Emphasis is placed on the evolution/transition from physician to physician leader. Cases, articles and discussions provide participants with insight into the real-world examples of roles, challenges, successes and mistakes of those in leadership positions. A framework for leadership is introduced and successive sessions take selected elements of the framework for further study. Topics include; characteristics and skills of great leadership; current challenges, professionally and personally; operational challenges and opportunities; time management; leading from anywhere in the organization; an introduction to health care organization governance; the physician's role in health care organization governance; human resource issues such as, developing others, working with difficult people, personal development, and career management.

Course Restricted: HCM students only

Health Care Management 722 Section: 1

Financial Management of Health Care Organizations (190493)

Carl Byers

2020 Summer (2.5 Credits)

Schedule: MTWRFSS 0200 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap: 32

This course aims to help students gain a comprehensive understanding of the role of finance in healthcare organizations, building on students' learning about financial and managerial accounting. Topics include financial management of working capital and investment decision-making, capital structure, and mergers

and acquisitions of health care organizations. In essence, this is a finance class tailored to the needs and circumstances of healthcare organizations. Topics include the time value of money, the relationship between risk and return, the cost of equity and debt capital, mergers and acquisitions, and evaluation of investment projects. Materials will primarily involve cases about a range of health care organizations (hospitals, insurers/ managed care plans, neighborhood health centers, physician groups, home health agencies, etc.). Work by students will include short assignments, case preparation, and an in-depth group project about a particular financing transaction for a hospital system. Guests will join the class for discussion about the implementation of core concepts in their organizations. The class meets once per week for extensive sessions that include a blend of these teaching topics and methods.

Course Restricted: HCM students only

Class Notes: **Class meeting dates and times communicated by the department.**

Requirements: **Prerequisite: HCM719**
Course Restricted: HCM students only

Carl Byers

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

This course aims to help students gain a comprehensive understanding of the role of finance in healthcare organizations, building on students' learning about financial and managerial accounting. Topics include financial management of working capital and investment decision-making, long term capital structure, and mergers and acquisitions of health care organizations. Materials will primarily involve cases about a range of health care organizations (hospitals, insurers/ managed care plans, neighborhood health centers, physician groups, home health agencies, etc.). Topics include the time value of money, securities, project finance, the cost of capital, mergers and acquisitions, and long term capital structure. Materials will involve short assignments, cases about a range of finance topics in health care organizations, and an in-depth group project about a particular financing transaction for a hospital system. Guests may also join the class for discussion about the implementation of core concepts in their organizations.

2021 Spring (1.25 Credits)

Schedule: S 0130 PM - 0300 PM
M 0945 AM - 0100 PM
F 0945 AM - 0100 PM

Instructor Permissions: None

Enrollment Cap: 32

This course focuses on the conceptual framework needed to plan for the long-term viability of health care organizations. Using selected readings and case studies of both health care and non-health care organizations, students will learn to appreciate the concepts of competitive strategy and competitive advantage primarily through practice in analysis. The objective is to provide students with the conceptual

tools and the practical skills to enable them to formulate, execute, and evaluate organizational strategy.

Operations Management in Service Delivery Organizations (190495)

Joseph Pliskin

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0930 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** 32

Operations management is concerned with evaluating the performance of operating units, understanding why they perform as they do, designing new or improved operating procedures and systems for competitive advantage, making short-run and long-run decisions that affect operations, and managing the

work force. To understand the role of operations in any organization, a manager must understand process analysis, capacity analysis, types of processes, productivity analysis, development and use of quality standards, and the role of operating strategy in corporate strategy. The course will also present the focused management approach which can help an organization achieve much more with existing resources. The course will demonstrate how operations management—in particular Lean and the Theory of Constraints (TOC)—can rapidly enhance value and performance in any health care organization. Utilizing a systems approach that will be relevant for health care managers and executives, it unpacks and demystifies concepts such as performance measures, operations, quality and value enhancement, all as they relate to eliminating waste and non-value-adding activities.

Course Note: Similar to HPM 232 - adapted for the non-residential program.

Course Restricted: HCM students only

Class Notes: **Class meeting dates and times communicated by the department.**

Requirements: **Course Restricted: HCM students only**

Instructor Permissions: None **Enrollment Cap:** 30

This course is taught in two parts; the course focuses on the policy, operations and finance of provider payment, as well as the legal and contractual elements of provider payment. The course will evaluate multiple dimensions of health care cost and payment, with an emphasis on how payment systems influence provider organization, behavior and performance. The focus of this course is the US health care system, although class members will do an exercise involving provider payment across multiple countries. Participants will review sources and uses of health care dollars, and examine how these have changed in recent years as well as further changes that are likely as a result of legislative and regulatory initiatives. We will examine various stakeholder points of view on health care finance- and assess how changes in finance methods lead to changes in health care delivery and can lead to different experiences and outcomes for both providers and patients.

Legal and regulatory:
The legal and regulatory sessions will cover the key legal issues with which the health care executive needs to be familiar. The goal is to provide some sensitivity to the basic structure of the law, not to train the

class as amateur lawyers. If successful, the students will be in a position to ask their legal team reasonable questions, relating to the underlying rationality of the law.

Course Restricted: HCM students only

Instructor Permissions: None

Enrollment Cap: 32

This course is taught in two parts; the course focuses on the policy, operations and finance of provider payment, as well as the legal and contractual elements of provider payment. The course will evaluate multiple dimensions of health care cost and payment, with an emphasis on how payment systems influence provider organization, behavior and performance. The focus of this course is the US health care system, although class members will do an exercise involving provider payment across multiple countries. Participants will review sources and uses of health care dollars, and examine how these have changed in recent years as well as further changes that are likely as a result of legislative and regulatory initiatives. We will examine various stakeholder points of view on health care finance- and assess how changes in finance methods lead to changes in health care delivery and can lead to different experiences and outcomes for both providers and patients.

Legal and regulatory:
The legal and regulatory sessions will cover the key legal issues with which the health care executive needs to be familiar. The goal is to provide some sensitivity to the basic structure of the law, not to train the class as amateur lawyers. If successful, the students will be in a position to ask their legal team reasonable questions, relating to the underlying rationality of the law.

Course Restricted: HCM students only

Class Notes: **This class will also meet on January10 from 2:00 pm to 3:30 pm and on Jan 11 from 1:30 to 3:00 pm.**

This course will provide physician executives with practically-oriented insights into quality improvement in healthcare organizations, based on the study of lessons from students' own quality-related field projects" performed during the 2nd academic year of the MHCM program. At the end of this course, students will understand their own roles in quality improvement and management, and be able to lead their organizations' efforts in those areas, using a methodical approach and process: from conception, design and initial planning, to implementation, measurement, analysis and redesign. The course objective is not to make students expert in each of these components of the QI process, but to enable them to provide effective leadership to organizations, teams and colleagues carrying out these activities.

Skills & Methods of Health Care Negotiation & Conflict Resolution (190500)

Linda Kaboolian

2018 Summer (2.5 Credits)

Schedule: MTWRF 0200 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap: 30

This course introduces students to the theory and practice of negotiation and conflict resolution. Particular emphasis is placed on integrating analytic skills, negotiation techniques and conflict resolution methods into the practice of health care management. Students are also introduced to the concepts and practice of the five dimensions of "meta-leadership," a strategy to build connectivity of strategy and action amongst different departments and organizations in a complex health system. A portion of the class is devoted to simulation exercise in which general concepts and methods are demonstrated and practiced. These

exercises model disputes typical of health care settings and health care management problems. The debriefings that follow each exercise offer individual feedback, as well as the opportunity to examine applied issues of organizational communication, system design and conflict. By the end of the course, students will have knowledge of the overt and covert causes of conflict, concepts for analyzing disputes and a variety of methods useful for preventing, resolving and when necessary, initiating a conflict.

Course Note: Similar to HPM 278 - but more extensive than traditional course.
Course Restricted: HCM students only

Instructor TBD

2013 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 99

This course introduces students to the theory and practice of negotiation and conflict resolution. Particular emphasis is placed on integrating analytic skills, negotiation techniques and conflict resolution methods into the practice of health care management. Students are also introduced to the concepts and practice of the five dimensions of meta-leadership," a strategy to build connectivity of strategy and action amongst different departments and organizations in a complex health system. A portion of the class is devoted to simulation exercise in which general concepts and methods are demonstrated and practiced. These exercises model disputes typical of health care settings and health care management problems. The debriefings that follow each exercise offer individual feedback, as well as the opportunity to examine applied issues of organizational communication, system design and conflict. By the end of the course, students will have knowledge of the overt and covert causes of conflict, concepts for analyzing disputes and a variety of methods useful for preventing, resolving and when necessary, initiating a conflict.

Course Note: Similar to HPM 278 - but more extensive than traditional course.

2020 Fall (1.25 Credits) **Schedule:** S 0130 PM - 0445 PM
S 0300 PM - 0445 PM

M 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 30

The objective of this course is to improve negotiation, communication and conflict resolution skills for use in professional and personal settings.

This course introduces students to the theory and practice of negotiation and conflict resolution. Particular emphasis is placed on integrating analytic skills, negotiation techniques and conflict resolution methods into the practice of health care management. The class is organized around hands-on simulations where general concepts and methods are demonstrated and practiced.These exercises model fundamental dilemmas in negotiaion and are generalizable to disputes typical of health care settings and health care management problems. The debriefings that follow each exercise offer individual feedback, as well as the opportunity to examine applied issues of organizational communication, system design and conflict.

The capacity to innovate is critical in today's rapidly changing healthcare environment. Design thinking is a disciplined approach to innovation that has been adopted by leading healthcare organizations (e.g. Mayo Clinic, Kaiser, IBM Watson Health) and government agencies (e.g. CDC, HHS). In constrast to a traditional approach to problem solving that focuses on deciding amoung known solutions, an innovative approach to problem solving that focuses on deciding amoung known solutions, an innovative approach seeks the best solution possible given available resources, time, and team competencies. Innovative problem solving maximizes leaning to reduce uncertainty by focuses on generation of new alternatives, experimentation, and exploration of multiple solutions. This course includes a mix of individual and group exercises in class as well as a series of assignments that enable students to effectively use innovation tools, acquire skills, and adopt mindsets that completement the analytical approaches developed in other courses.

Subject: Interdepartmental

Interdepartmental 216 Section: 1

Critical Thinking and Action for Public Health Professionals (203334)

Laurie Pascal

2017 Fall (5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: Instructor **Enrollment Cap:** 53

Successful public health practitioners need the knowledge, skills, and leadership traits to address challenging public health issues in an increasingly complex and interconnected world. Whether in government, non-profits, hospitals and health systems, or other organizations, public health professionals are called upon to think analytically and creatively, engage and communicate effectively with multiple constituencies, develop sustainable strategies, and lead teams to implement workable solutions.

This interdisciplinary course is an introduction to the field of public health, incorporating ways of thinking and approaches from environmental health, social and behavioral science, life science, health policy and management, global health, ethics, communication and many other critical disciplines. The objective is to enable students to gain fundamental, crosscutting public health content knowledge and skills in order to begin approaching and solving public health problems in a thoughtful, systematic and comprehensive manner, i.e. to think and act like public health professionals.

Using an active learning approach, students are engaged through case studies, debates, team projects and real world experiences to expand their capabilities in effective, ethical decision making while immersed in complex situations. Fields of study are investigated through the lens of current, and very real, public health issues taught by experts in those areas.

Class Notes: **ID 216 is restricted to academic year MPH 45 and MPH 65 students who have received permission to enroll in the course. Student can drop the class until the add/drop deadline of the Fall 2017 semester. Please contact Sarah Stillman (stillman@hsph.harvard.edu), Educational Project Coordinator, for more information.**

Principles of Injury Control (190764)

David Hemenway

2021 Spring (2.5 Credits) **Schedule:** R 0400 PM - 0650 PM

Instructor Permissions: None **Enrollment Cap:** 50

This course provides an introduction to a serious public health problem - intentional and unintentional injury - and provides a framework for examining control options. Specific categories of injuries, such as motor vehicle crashes and violence, and specific risk factors for serious injury such as opiod addiction and firearms, are examined in detail.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HM, MPH65 HM, MPH45 HP, MPH65 HP, HPM SM1

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending

no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Material Fee Tier	< $25

Ethical Basis of the Practice of Public Health (190768)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 68

Provides students with a broad overview of some of the main philosophical and moral ideas that are used as a basis for resolving debates of public health policy. Helps students develop their own capacities to analyze, criticize, evaluate, and construct policy-oriented arguments

The practice of public health require moral reflection and argument for a number of reasons. Public health measures often make demands on the public, such as changes in lifestyles or restrictions of liberties, and these must be justified. Practitioners of public health frequently face ethical dilemmas, both in framing policy and in practice in the field, whose optimal resolution is uncertain. The work of public health practitioners is sometimes challenged on moral grounds, which must be examined and, when appropriate, countered.

The resources for moral argument and justification in public health are found in moral philosophy and philosophical theories of justice; and also in history, the social sciences, and in the science of public health itself. Students in this course will survey some of the principle philosophical approaches in addressing a number of ethical controversies in contemporary public health.

Issues and concepts discussed in the course will be drawn from this list:

Definitions of healthEthical issues in health measurement: DALYs and QALYsEthical norms in public health and clinical medicineMoral epistemology and the rational foundation of moral normsEthics and human rightsEthical relativismConsequentialist and deontological ethical theoriesContractualist and rival theories of distributive justiceState coercion and paternalism in public healthIndividual and social responsibility for healthEthics and emergency humanitarian interventionsEthical issues in health resource allocationHealth disparities and inequalitiesEthical issues in international health research involving human subjectsEthics of public health communicationEthical integrity of practioners: conflict of interest and corruption

Instructor Permissions: None **Enrollment Cap:** 56

This is a year-long course worth a total of 2.5 credits (1.25 in the fall and 1.25 in the spring).

This course explores the managerial skills required of public health professionals in any setting -- leadership, interdisciplinary teams, and communication. Fieldwork provides practical experience in health management.

Course Restricted: MPH Health Management students.

Requirements: **HSPH: ID267**

Additional Course Attributes:

Subject: Decision Science

Decision Science 202 Section: 1

Decision Science for Public Health (204407)

Sue J. Goldie

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

Challenges in public health policy and clinical medicine are marked by complexity, uncertainty, competing priorities and resource constraints. This course is designed to introduce the student to the methods and applications of decision analysis and cost-effectiveness analysis in clinical and public health decision making. The objectives of the course are: (1) to provide a basic introduction to the methods and tools of decision science, and to recognize when, how, and in what context they can provide value in clinical and public health decision making; (2) to equip students with the ability to structure and bound a decision problem logically (articulating the objective, perspective, and time horizon), identify key elements (alternatives, uncertainties, and outcomes) and influential factors (preferences, risk attitudes, values); (3) to provide students with basic skills in revising probabilities given new information, building and analyzing decision trees, conducting cost effectiveness analysis, performing sensitivity analyses, and communicating results; (4) to enable students to thoughtfully and critically evaluate published analyses conducted to evaluate or inform clinical strategies, health technologies, and public health policies in developed and developing countries.

Enrollment Requirements:

Preference is given to students in the MPH-EPI and Summer-Only programs. However, all degree students are encouraged to participate

Class Notes: **This course serves as a pre-requisite for RDS 285 and RDS 288. Students cannot take RDS 202 if they have already taken RDS 280 or RDS 286 (exceptions only allowed with permission of RDS 202 instructor)**

Requirements: **Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students and academic year students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission. All academic year students must request instructor permission prior to adding themselves to the waitlist.**

Decision Analysis for Health and Medical Practices (191102)

Ankur Pandya

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 164

This course is designed to introduce the student to the methods and growing range of applications of decision analysis and cost-effectiveness analysis in health technology assessment, medical and public health decision making, and health resource allocation. The objectives of the course are: (1) to provide a basic technical understanding of the methods used, (2) to give the student an appreciation of the practical problems in applying these methods to the evaluation of clinical interventions and public health policies, and (3) to give the student an appreciation of the uses and limitations of these methods in decision making at the individual, organizational, and policy level both in developed and developing countries.

Course Note: Introductory economics is recommended but not required.

Course Note: Students cannot take RDS 280 if they have already taken RDS 286 (exceptions only allowed with permission of RDS 280 instructor).

Pre-requisites: BIO200 or BST201 or BST202&203 or BST206&207 or BST206&208 or BST206&209 (all courses may be taken concurrently) or permission from the instructor. Students who have taken RDS 286 may not take RDS 280.

Requirements: **Pre-requisites: ID 201 or BIO200 or BST201 or BST202&203 or BST206&207 or BST206&208 or BST206&209 (all courses may be taken concurrently).**

Students who have taken RDS 286 may not take RDS 280.

Economic Evaluation of Health Policy & Program Management (191104)

Stephen Resch

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 70

This course features the application of health decision science to policymaking and program management at various levels of the health system. Both developed and developing country contexts will be covered. Topics include: [1] theoretical foundations of cost-effectiveness analysis (CEA) with comparison to other methods of economic evaluation; [2] challenges and critiques of CEA in practice; [3] design and implementation of tools and protocols for measurement and valuation of cost and benefit of health programs; [4] use of evidence of economic value in strategic planning and resource allocation decisions, performance monitoring and program evaluation; [5] the role of evidence of economic value in the context of other stakeholder criteria and political motivations.
Course Prerequisites: Students must have taken RDS280 or RDS286. Concurrent enrollment is allowed. Prior coursework in Microeconomics is recommended.

Requirements: **Prerequisites: RDS280 OR RDS286 (concurrent enrollment allowed). Prior coursework in Microeconomics is recommended.**

Decision Theory (191105)

James Hammitt

2020 Fall (5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 24

Introduces the standard model of decision-making under uncertainty, its conceptual foundations, challenges, alternatives, and methodological issues arising from the application of these techniques to health issues. Topics include von Neumann-Morgenstern and multi-attribute utility theory, Bayesian statistical decision theory, stochastic dominance, the value of information, judgment under uncertainty and alternative models of probability and decision making (regret theory, prospect theory, generalized expected utility). Applications are to preferences for health and aggregation of preferences over time and across individuals.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Decision Analysis Methods in Public Health and Medicine (191106)

Nicolas Menzies

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 60

An intermediate-level course on methods and health applications of decision analysis modeling techniques. Topics include Markov models, microsimulation models, life expectancy estimation, cost estimation, deterministic and probabilistic sensitivity analysis, value of information analysis, and cost-effectiveness analysis.

Course Note: Familiarity with matrix algebra and elementary calculus may be helpful but not required; lab or section times to be announced at first meeting.

Course Prerequisites: (BST201 or ID201) and (RDS280 or RDS286). Concurrent enrollment is allowed for RDS 286.

Instructor Permissions: None **Enrollment Cap:** 60

An intermediate-level course on methods and health applications of decision analysis modeling techniques. Topics include Markov models, microsimulation models, life expectancy estimation, cost estimation, deterministic and probabilistic sensitivity analysis, value of information analysis, and cost-effectiveness analysis.

Course Note: Familiarity with matrix algebra and elementary calculus may be helpful but not required; lab or section times to be announced at first meeting.

Course Prerequisites: (BST201 or ID201) and (RDS280 or RDS286). Concurrent enrollment is allowed for RDS 286.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HP, MPH65 HP, DRPH Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM

Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM

Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be

automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Decision Analysis in Clinical Research (191107)

Uwe Siebert

Eve Wittenberg

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 70

Decision Analysis in Clinical Research (RDS286) introduces students to systematic methods of decision analysis relevant to clinical decision making, clinical research, comparative effectiveness research and cost-effectiveness analysis. Topics of the sessions include: the use of causal estimands to express efficacy and real-world clinical effectiveness; the use of probability and sensitivity analysis to express and assess uncertainty; Bayes theorem and evaluation of diagnostic procedures; utility theory and its use to express patient preferences for health outcomes; benefit-harm analysis for patient-shared decision making and clinical guideline development; cost-effectiveness analysis and health technology assessment for health policy decision making. Lecture s are accompanied by case problems, review sessions and computer exercises.

After this course, students will understand the uses, strengths, limitations and ethical issues of decision analysis and cost effectiveness in clinical decision making and research design. We will discuss case examples from different disease areas including cancer, cardiovascular disease, infectious disease and others.

Requires prior knowledge of clinical medicine (through training and/or clinical research experience) and strong quantitative ability/aptitude. Priority for enrollment will be given to students in the Program for Clinical Effectiveness (PCE).

Course Requirements:
Pre-requisites: BST202 or BST206 (which may be taken concurrently) or BST201. Course restricted: HSPH Degree or PCE students. Any other interested students must request instructor permission to enroll in this course.

Requirements: **Pre-requisites: BST202 or BST206 (which may be taken concurrently), or BST201.**
Course restricted: HSPH Degree or PCE students.

Decision Analysis in Clinical Research (191107)

Uwe Siebert

Eve Wittenberg

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 70

Decision Analysis in Clinical Research (RDS286) introduces the following topics: decision analysis methods relevant to clinical decision making, clinical research and comparative effectiveness research; the use of probability to express uncertainty; Bayes theorem and evaluation of diagnostic test strategies; sensitivity analysis; utility theory and its use to express patient preferences for health outcomes; cost-effectiveness analysis in clinical research and health policy; and use, limits and ethical issues of decision analysis and cost-effectiveness in clinical decision making and research design.

Requires knowledge of clinical medicine, though training and/or clinical research experience. Strong quantitative ability/aptitude is also required. Priority for enrollment will be given to students in the Program for Clinical Effectiveness (PCE). HSPH degree candidates who are not in PCE must demonstrate knowledge of clinical medicine, through training and/or clinical research experience. (Others should consider taking RDS 280 as an alternative.) Non-degree students must provide evidence of both clinical training/ research experience and mathematical ability (e.g., grades in quantitative courses taken, test scores).

Course Prerequisites:
BST202 or BST206 (which may be taken concurrently) or BST201

Restricted to HSPH degree or PCE students.

Class Notes: **Enrollment Note: Enrollment for this course is limited. All non-degree summer session students must request instructor approval, at the time of registration, through the my.harvard system. Non-degree summer students may also be asked by the instructor or department administrator to provide additional materials that supplement their request to take the course. All other students (non-degree PCE and degree students) must meet the course guidelines/prerequisites to enroll.**

Myriam Hunink

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 32

This course deals with intermediate-level topics in the field of medical decision making. Topics that will be addressed include decision models, evaluation of diagnostic tests, utility assessments, multi-attribute utility theory, Markov cohort models, microsimulation state-transition models, calibration and validation of models, probabilistic sensitivity analysis, value of information analysis, and behavioral decision making. The course will focus on the practical application of techniques and will include published examples and computer practicums. During the course you will have the opportunity to work on a decision problem which you select yourself, which could lead to a publishable paper.

Prerequisites: An introductory course in Decision Analysis (RDS280 or RDS286 or RDS 202 or faculty approval of an equivalent course) and knowledge of probability and statistics. Concurrent enrollment allowed with RDS 286.

Restricted to HSPH degree or PCE students.

Class Notes: **Enrollment Note: Enrollment for this course is limited. All non-degree summer session students must request instructor approval, at the time of registration, through the my.harvard system. Non-degree summer students may also be asked by the instructor or department administrator to provide additional materials that supplement their request to take the course. All other students (non-degree PCE and degree students) must meet the course guidelines/prerequisites to enroll.**

This course has limited enrollment. Prerequisites and faculty approval are required.

This course deals with intermediate-level topics in the field of medical decision making. Topics that will be addressed include modeling issues, evaluation of diagnostic tests, ROC and summary ROC analysis, utility assessment, multi-attribute utility theory, Markov process models, Monte Carlo simulation modeling, methods for sensitivity analysis, value of information analysis, and behavioral decision making. The course will focus on the practical application of techniques and will include published examples and a computer practicum. During the course you will have the opportunity to work on a decision problem which you select yourself.

Course Note: Knowledge of probability and statistics required. This is not an introductory course. Some background in decision analysis is required.

Methods for Decision Making in Medicine (191109)

Myriam Hunink

2016 Summer (2.5 Credits) **Schedule:** MTWRF 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 35

This course deals with intermediate-level topics in the field of medical decision making. Topics that will be addressed include decision models, evaluation of diagnostic tests, utility assessments, multi-attribute utility theory, Markov cohort models, microsimulation state-transition models, calibration and validation of models, probabilistic sensitivity analysis, value of information analysis, and behavioral decision making. The course will focus on the practical application of techniques and will include published examples and computer practicums. During the course you will have the opportunity to work on a decision problem which you select yourself, which could lead to a publishable paper.

This is not an introductory course. Prerequisites are an introductory course in Decision Analysis (RDS280 and RDS286 or faculty approval of an equivalent course) and knowledge of probability and statistics. The course has limited enrollment.

Experiential Learning and Applied Research in Decision Analysis (206897)

Jane Kim

2020 Spring (2.5 Credits) **Schedule:** F 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 24

This course is geared towards Masters-level students from any department. Students will undertake semester-long research projects on a clinical or public health decision problem using decision analysis, simulation modeling, and/or cost-effectiveness analysis. Each session will be dedicated to a particular topic of decision analytic methods or student presentations of prospectus, works-in-progress, and final projects. Students may work alone or in pairs, including at least one student who is familiar with the clinical content area of the project.

Prerequisite: (RDS 280 or 286) and (RDS 285 or 288)

Requirements: **Prerequisite: (RDS 280 or 286) and (RDS 285 or 288)**

Additional Course Attributes:

Jane Kim

2019 Spring (2.5 Credits) **Schedule:** F 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 24

This course is geared towards Masters-level students from any department. Students will undertake

semester-long research projects on a clinical or public health decision problem using decision analysis, simulation modeling, and/or cost-effectiveness analysis. Each session will be dedicated to a particular topic of decision analytic methods or student presentations of prospectus, works-in-progress, and final projects. Students may work alone or in pairs, including at least one student who is familiar with the clinical content area of the project.

Prerequisite: (RDS 280 or 286) and (RDS 285 or 288)

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HP, MPH65 HP

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisite: (RDS 280 or 286) and (RDS 285 or 288)**

Immunology and Infectious Disease

Subject: Immunology Infectious Disease

Immunology Infectious Disease 201 Section: 1

Eradicating Malaria and Neglected Tropical Diseases (190830)

Jeffrey Dvorin

Manoj Duraisingh

Dyann Wirth

2020 Fall (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 45

This course is a survey to introduce core concepts and tools of disease eradication. We will discuss the current tools (or lack of tools), the evidence for their effective use, and their successes and failures, and we will discuss the policies and programs required to effectively use these tools for infectious disease control and eradication. In Session 1-6, we will focus on malaria as a context for introducing the many aspects of disease eradication. From Session 7-13, each session will focus on control and/or eradication of a new neglected tropical disease. Session 14-16 will then synthesize the course content and introduce new real-world challenges that will shape the implementation of disease control and eradication programs discussed in this course.

The class will meet twice a week, and each session will be divided into a didactic/lecture part and a discussion part. During the discussion, we will actively evaluate the evidence behind current global public health practices, emphasizing "cross-cutting" concepts and tools that are relevant to several of the diseases discussed in this course.

The tangible skills that will be obtained during this course include the ability to recognize, utilize, and critically evaluate strategies for disease eradication and the ability to effectively communicate a plan for systematic control and/or eradication of malaria and neglected tropical diseases.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Tuberculosis (190831)

Sarah Fortune

2018 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 22

This is a comprehensive survey course on tuberculosis featuring lectures by some of the leading authorities in the field. The course is designed for students from diverse backgrounds, with the goal of teaching cross-disciplinary thinking and communication. It frames the global TB epidemic as a multi-scale problem, introducing students to the challenges posed by the basic biology of the organism, the clinical challenges of TB care and the health systems challenges associated with a disease that disproportionately impacts resource limited populations. The course will use case-based teaching - posing current questions that students will be asked to address from the perspective of key constituents in the field. Students will be evaluated on the basis of class participation and a written response to a problem in the field.

Course Note: This course is intended for students interested in any aspect of tuberculosis, biological, programmatic, international health, and epidemiologic. Some knowledge of immunology and molecular

biology is desirable, but not required.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Tuberculosis (190831)

Sarah Fortune

2017 Spring (2.5 Credits) **Schedule:** TR 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 22

This is a comprehensive survey course on tuberculosis featuring lectures by some of the leading authorities in the field. The first half of the course focuses on population issues (TB epidemiology in the US and the world), transmission, modeling, and programmatic issues (the essentials of good TB control both here and in high burden countries). The second month deals more with the biomedical aspects of TB, immunology, diagnosis, decision analysis, and treatment, again, both here and abroad. Because of involvement of several of the faculty, special attention is paid to the global problem of multidrug resistant TB, and the work of Partners in Health, an NGO associated with the medical school. During the second month, medical students join the SPH students for an elective course involving patient interviews at the

state TB hospital. They present these cases and related TB topics of interest. THe course ends on or near World TB Day, with optional TB-related activities in the Boston area.

Course Note: This course is intended for students interested in any aspect of tuberculosis, biological, programmatic, international health, and epidemiologic. Some knowledge of immunology and molecular biology is desirable, but not required.

What Works and Why: Building and Evaluating Successful Programs in Global Health (190832)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

Course Restricted: DrPH students only.

In this course, we will examine large public health programs that have been implemented at scale and have made a difference in the lives of large numbers of people. We will also explore how research is done to inform public health policy, practice and implementation in specific settings and situations. At the completion of the course, you will be able to:

- **Analyze specific, major public health problems and the medical and scientific evidence as to**

how these problems can be addressed or alleviated;

- **Synthesize the policy development needed, the interventions implemented and the cost considerations taken into account in specific large scale public health programs created to intervene and help alleviate the disease burden;**
- **Evaluate the monitoring of major public health interventions to determine their actual impact and how to design intervention methods.**

Throughout the summer, Dr. Marlink and guest faculty will describe specific public health intervention programs, including the public health problem and the medical or scientific evidence for the development of the interventions. Then, you will work with your peers to lead the class in a substantive discussion about the program, including:

1. **The policy development and politics involved in developing the interventions;**
2. **The program development of the public health intervention itself, including health systems impacted and costs or cost analyses;**
3. **The monitoring and evaluation undertaken to document the intervention?ÇÖs impacts.**

Parasites: Expert Cell Biologists and Immunologists (204431)

Barbara Burleigh

Wendy Garrett

2018 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

This advanced readings course focuses on a group of parasitic protozoa and helminths responsible for the highest burden of disease in developing countries. These organisms include plasmodium, toxoplasma, leishmania, trypanosomes, amoebae, giardia and schistosomes. Weekly lectures from invited speakers will enhance critical readings of the current literature and student-led discussions. Central themes in the pathogenesis of infectious diseases will be examined in the framework of the unique biology of eukaryotic parasites and their relationship to host defense. Readings and discussions will emphasize experimental approaches and mechanisms in parasitic infection from a molecular and cellular perspective. A final paper, in the format of a research proposal or a perspective articles, is required

Biology and Control of Insect Vectors of Human Health (190834)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

The course will provide an introduction to the biology, genetics and control of insect vectors of infectious diseases that are relevant for Public Health. The focus will be on the mosquito vectors of human malaria, however students will study other vector-borne diseases including African Trypanosomiasis, Dengue and Yellow Fever. The course will address the major biological components shaping vectorial capacity: vector/parasite interactions; immunity; host seeking behavior, reproduction; chemoreception. The role of symbionts and microbiota in insect physiology and disease transmission will also be discussed. Strengths and limitations of current control strategies based on the use of insecticides (bednets and sprays), traps, larvicidal compounds, biological agents and environmental strategies will be discussed, as well as novel strategies based on genetically modified organisms and paratransgenic control (bacteria/fungi). Students will also learn current methods for functional and comparative genomics of principal disease vectors.

Infectious Disease Outbreaks of the 20th and 21st Centuries:Strategies for Investigation and Control (211064)

Roger Shapiro

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

Infectious disease outbreaks gave rise to the fields of epidemiology and public health, and remain critical drivers of public health policy and expenditures. Modern infectious disease outbreaks continue to challenge our methods of investigation and control, but new laboratory and investigative techniques, and in some cases new control measures, are also available. This course will provide a case-based approach to the investigation and control of landmark and representative infectious disease outbreaks and epidemics in the modern era. The focus on "epidemic potential" will provide a foundation for the student to understand how each pathogen exploits unique biologic and environmental opportunities, and how these can be addressed in the public health response. Course readings and projects will concentrate on the fundamental epidemiologic skills needed to investigate and control an outbreak, and lectures will explore key questions raised by important epidemics.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

The focus on "epidemic potential" will provide a foundation for the student to understand how each pathogen exploits unique biologic and environmental opportunities, and how these can be addressed in the public health response. Course readings and projects will concentrate on the fundamental epidemiologic skills needed to investigate and control an outbreak, and lectures will explore key questions raised by important epidemics.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Immunology Infectious Disease 207 Section: 1

Infectious Disease Outbreaks of the 20th and 21st Centuries:Strategies for Investigation and Control (211064)

Roger Shapiro

2019 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

Infectious disease outbreaks gave rise to the fields of epidemiology and public health, and remain critical drivers of public health policy and expenditures. Modern infectious disease outbreaks continue to challenge our methods of investigation and control, but new laboratory and investigative techniques, and in some cases new control measures, are also available. This course will provide a case-based approach to the investigation and control of landmark and representative infectious disease outbreaks and epidemics in the modern era. The focus on "epidemic potential" will provide a foundation for the student to understand how each pathogen exploits unique biologic and environmental opportunities, and how these can be addressed in the public health response. Course readings and projects will concentrate on the fundamental epidemiologic skills needed to investigate and control an outbreak, and lectures will explore key questions raised by important epidemics.

Microbial Communities and the Human Microbiome (211163)

Curtis Huttenhower

Wendy Garrett

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course introduces students to the human microbiome and other microbial community concepts, including survey topics on relevant components of immunology, microbiology, ecology, health practice, and bioinformatics. It includes examples of the human microbiome's relevance to public health, such as chronic disease (e.g. cancer, inflammatory bowel disease). It also introduces study design considerations, model systems, and technologies for studying the microbiome in public health. Students completing the course will be able to:

- **Identify translational, basic biological, and population health topics relevant to the microbiome.**
- **Read and discuss current research literature on microbial community studies.**
- **Employ animal, molecular, and computational tools for microbial community research.**
- **Propose and execute introductory studies incorporating microbiome components and molecular technologies.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Vector-Borne and Zoonotic Infections (190839)

Rocio Hurtado

Edward Ryan

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 24

The course will focus on vector-borne and zoonotic infectious diseases of public health importance. The course will cover epidemiology, epizoology, clinical manifestations, pathogenesis, diagnosis, treatment, transmission, medical entomology, prevention, and control of diseases of particular import in resource-poor areas. Focus areas will include dengue, yellow fever, chikungunya, Zika, other arboviruses, rabies, plague, bartonellosis, borreliosis, typhus and other rickettsial infections, malaria, leishmaniasis, Chagas', African trypanosomiasis, filariasis, Ebola, and will introduce students to medical entomology, the importance of zoonotic reservoirs, and emerging infectious diseases and outbreaks. Course activities include lectures, case and field studies, lab practica, and readings. Evaluation will be based on an examination and class participation.

Infections Transmitted through Water and Food (190840)

Edward Ryan

Rocio Hurtado

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 24

The course will focus on infectious diseases of public health importance that are transmitted through water and food. The course will cover modes of transmission, epidemiology, clinical manifestations, pathogenesis, diagnosis, treatment, prevention, and control of diseases of particular import in resource-poor areas. Focus areas will include intestinal viruses (including enteroviruses, rotavirus, caliciviruses, hepatitis viruses), intestinal bacterial pathogens (including shigella, salmonella, typhoid, cholera, enterotoxigenic E. coli), intestinal protozoa (including amebiasis, giardiasis, cryptospordiosis, cyclosporiasis), intestinal helminths (ascariasis, hookworm, trichuriasis, strongyloidiasis), dracunculiasis, larva migrans, taeniasis, cysticercosis, echinococcosis, liver flukes, lung flukes, and schistosomiasis. Focus areas will include disease prevention strategies, public health treatment strategies including oral rehydration, response to outbreaks (cholera) and effects of globalization, urbanization, and climate change. Course activities include lectures, case and field studies, lab practica, readings. Evaluation will be based on examination and class participation.

Science of Malaria Eradication (190841)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

An eradication effort fifty years ago - based on one insecticide (DDT) and one anti-malarial drug (chloroquine) - led to regional successes, but failed to achieve global eradication. This course will explore the genetics and cell biology of malaria parasites, mosquito vectors and human hosts, to achieve a better understanding of malaria biology; the successes and failures of the previous eradication effort; and prospects for eradication in our lifetimes.

This seminar will address a variety of topics relevant to malaria and its control, including the basic biology of malaria parasites, as well as many other aspects of this endemic disease.

Student will review literature covering malaria biology and control, understand and present to scientific audiences historical and current content and review literature on malaria biology and control.

Master of Public Health

Subject: Interdepartmental

Interdepartmental 216 Section: 1

Critical Thinking and Action for Public Health Professionals (203334)

Laurie Pascal

2018 Summer (5 Credits) **Schedule:** MTWRF 0845 AM - 1200 PM

Instructor Permissions: None **Enrollment Cap:** 47

Successful public health practitioners need the knowledge, skills, and leadership traits to address challenging public health issues in an increasingly complex and interconnected world. Whether in government, non-profits, hospitals and health systems, or other organizations, public health professionals are called upon to think analytically and creatively, engage and communicate effectively with multiple constituencies, develop sustainable strategies, and lead teams to implement workable solutions.

This interdisciplinary course is an introduction to the field of public health, incorporating ways of thinking and approaches from environmental health, social and behavioral science, life science, health policy and management, global health, ethics, communication and many other critical disciplines. The objective is to enable students to gain fundamental, crosscutting public health content knowledge and skills in order to begin approaching and solving public health problems in a thoughtful, systematic and comprehensive manner, i.e. to think and act like public health professionals.

Using an active learning approach, students are engaged through case studies, debates, team projects and real world experiences to expand their capabilities in effective, ethical decision making while immersed in complex situations. Fields of study are investigated through the lens of current, and very real, public health issues taught by experts in those areas.

Class Notes: **Course restricted to students in the MPH-EPI program**

Requirements: **HSPH: ID 216**

Critical Thinking and Action for Public Health Professionals (203334)

Laurie Pascal

2019 Summer (5 Credits) **Schedule:** MTWRF 0830 AM - 1200 PM

Instructor Permissions: None **Enrollment Cap:** 65

Successful public health practitioners need the knowledge, skills, and leadership traits to address challenging public health issues in an increasingly complex and interconnected

world. Whether in government, non-profits, hospitals and health systems, or other organizations, public health professionals are called upon to think analytically and creatively, engage and communicate effectively with multiple constituencies, develop sustainable strategies, and lead teams to implement workable solutions.

This interdisciplinary course is an introduction to the field of public health, incorporating ways of thinking and approaches from environmental health, social and behavioral science, life science, health policy and management, global health, ethics, communications and many other critical disciplines. Students will analyze and assess social, cultural, political, environmental, and financial factors, and the impact of different approaches on diverse populations, as they tackle current global health problems.

The course is structured in distinct modules, each focusing on one or a constellation of related real, timely public health issues. Using lectures, discussion and experiential learning approaches, faculty who are expert in their respective fields will engage students in understanding when and how to apply theory and practice to make effective, ethical decisions. The objective is to enable students to gain fundamental, crosscutting public health content knowledge and skills to begin approaching and solving public health problems in a thoughtful, systematic and comprehensive manner, i.e. to think and act like public health professionals.

Who is this course for?

ID 216 is a required course for MPH-EPI students in June 2019. This course is not open to other students during the June term.

Please contact Sarah Stillman (stillman@hsph.harvard.edu), Office of Education Course Manager, for questions.

Who is this course for?

ID 216 is a required course for academic year MPH-45 and MPH-65 students beginning 2018-2019 and MPH-65 HM entering in January of 2018. This course is not open to other students. Course lectures will be held in Kresge G-1. There are six required labs which will meet during regularly scheduled class time on September 17, October 3, October 22, October 29, November 26, and December 10 in separate classrooms. Students cannot move between sections of ID 216 once enrolled. The last day of class is December 10.

Exception: **in 2018-2019 academic year only, academic year MPH-45 students in Clinical Effectiveness may elect to take the course.**

Please contact Sarah Stillman (stillman@hsph.harvard.edu), Educational Project Coordinator, for questions.

2020 Summer (5 Credits) **Schedule:** MTWRF 0900 AM - 1130 AM

Instructor Permissions: None **Enrollment Cap:** 67

MPH Public Health Core introduces MPH-EPI students to four key public health arenas: health systems, budgeting and resources management, policy and politics, and the social, behavioral, and structural determinants of health. Each of the content areas will be taught by facultyexperts in these respective fields. Faculty will offer foundational frameworks and theories, discuss relevant research, explore potential interventions to improve health status and health outcomes, and encourage participants to apply their learning to current US and international issues. After learning the basics of how to write two critical communication/advocacy formats, i.e. policy memos and op-eds, students will author one of each type as the two primary graded assessments in this course.

Class Notes: **Note: This course is restricted to students in the MPH-EPI program. For questions and additional details, please contact Sarah Stillman, OED Course Manager, at stillman@hsph.harvard.edu**

Enrollment Cap: 158

The effective practice of public health in the 21st century requires working with interdisciplinary teams, communicating effectively with diverse audiences, and successfully leading and managing others to achieve better health outcomes for all populations. This course is designed to provide MPH students with an understanding of, and appreciation for, the fundamentals of leadership, management, and governance; cultural competence; and communicating with different audiences. Through case study analysis, experiential exercises, simulations, lectures, practitioner panels, and application activities and assignments, students will explore the opportunities and challenges of being in leadership positions and will develop important skills in negotiation and mediation, budgeting and resource management, systems thinking, and selecting and developing a variety of audience-appropriate communication strategies.

Class Notes:

Important Notes Regarding MPH 100 Sequence:

1- This course is only open to academic year MPH-45 and MPH-65 students who have not previously completed ID 216.

2- Eligible students are highly recommended to enroll in the MPH 100 sequence prior to their other fall courses.

3- Students enroll only in MPH 100a: Leadership and Communication. Once enrolled in MPH 100a, within 30 minutes, the student will be automatically enrolled in the other four courses (MPH 100b, MPH 100c, MPH 100d, and MPH 100e). When enrolling, students must leave 6.25 credits of space for the complete short course sequence, otherwise they risk not being enrolled in the course bundle.

4- Students are required to take all five short courses in the same semester and within the same section.

5- Students can elect to change their grading option to pass/fail for each of the five short courses, respectively, once enrolled. Students need to return to their enrollment to adjust the grading option per short course.

For any enrollment questions about the MPH Core Short Course Sequence please contact Sarah Stillman, Office of Education Course Manager, via email at stillman@hsph.harvard.edu.

Enrollment Cap: 150

The effective practice of public health in the 21st century requires working with interdisciplinary teams, communicating effectively with diverse audiences, and successfully leading and managing others to achieve better health outcomes for all populations. This course is designed to provide MPH students with an understanding of, and appreciation for, the fundamentals of leadership, management, and governance; cultural competence; and communicating with different audiences. Through case study analysis, experiential exercises, simulations, lectures, practitioner panels, and application activities and assignments, students will explore the opportunities and challenges of being in leadership positions and will develop important skills in negotiation and mediation, budgeting and resource management, systems thinking, and selecting and developing a variety of audience-appropriate communication strategies.

Class Notes:

Important Notes Regarding MPH 100 Sequence:

1. **This course is only open to academic year MPH-45 and MPH-65 students who have not previously completed ID 216.**
2. **Eligible students are highly recommended to enroll in the MPH 100 sequence prior to their other fall courses.**
3. **Students enroll only in MPH 100a: Leadership and Communication. Once enrolled in MPH 100a, within 30 minutes, the student will be automatically enrolled in the other four courses (MPH 100b, MPH 100c, MPH 100d, and MPH 100e). When enrolling, students must leave 6.25 credits of space for the complete short course sequence, otherwise they risk not being enrolled in the course bundle.**
4. **Students are required to take all five short courses in the same semester and within the same section.**
5. **Students can elect to change their grading option to pass/fail for each of the five short courses, respectively, once enrolled. Students need to return to their enrollment to adjust the grading option per short course.**

For any enrollment questions about the MPH Core Short Course Sequence please contact Sarah Stillman, Office of Education Course Manager, via email at stillman@hsph.harvard.edu.

MPH Qualitative Methods for Public Health (215930)

Emma-Louise Aveling

2020 Fall (0 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 380

This online module will provide a basic introduction to qualitative methods in public health research. It is intended for students with little or no prior knowfedge of qualitative research methods, but who have an interest in using or conducting qualitative research to inform health policy and practice. The module will provide an overview of the qualitative research paradigm, including fundamental principles of the paradigm, potential uses of qualitative inquiry in addressing public health issues, the value and utility of core data generation methods, and basic principles of qualitative data analysis.

2021 Spring (1.25 Credits) **Schedule:** MTWRF -

Instructor Permissions: Instructor **Enrollment Cap:** 100

Health systems are the foundation of health care delivery and an essential component of the public health landscape. MPH 102: Health Systems is designed to provide MPH students with an understanding of the components of a health system and alternative ways of understanding its structure, functions, and effectiveness. Through exploring both global and U.S. health systems within a comparative framework, students will learn to analyze the different choices that countries make in providing health coverage and health care to their populations and the challenges and benefits that these

choices entail. This is an introductory survey course that enables students to learn essential concepts in each topic area.

All questions about this course can be directed to Sarah Stillman (stillman@hsph.harvard.edu).

Class Notes: **This course requires permission by Sarah Stillman, OED Course Manager. To be considered for enrollment, request permission via the instructor permission feature in my.harvard during Winter Session enrollment period.**

This section is only available to specific populations of MPH students.

2021 Spring (1.25 Credits) **Schedule:** MTWRF -

Instructor Permissions: Instructor **Enrollment Cap:** 100

MPH 104: Social, Behavioral, and Structural Determinants of Health aims to provide an introduction to the social determinants of health, examine how social determinants influence the health of individuals, communities, and populations, provide an overview of public health intervention and evaluation approaches, and introduce health advocacy. Faculty will offer foundational frameworks and theories, discuss relevant research, explore potential interventions to improve health status and health outcomes, and encourage participants to apply their learning to current US and international contexts and issues. In addition to weekly discussion boards and check-in quizzes to grapple with the weekly material, students will get to complete two written assignments centered around identifying and addressing a solution about a health disparity in their home community. After learning the basics of how to write a critical communication/advocacy format (i.e. an op-ed), students will author one as the final assignment for this course.

All questions about this course can be directed to Sarah Stillman (stillman@hsph.harvard.edu).

Class Notes:

This course requires permission by Sarah Stillman, OED Course Manager. To be considered for enrollment, request permission via the instructor permission feature in my.harvard during Winter Session enrollment period.

Subject: Nutrition

Nutrition 200 Section: 1

Introduction to Nutrition Science (216276)

Shilpa Bhupathiraju

Kassandra Munger

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 24

What are nutrients? How does the human body absorb and utilize nutrients? How is nutrition relevant to certain chronic diseases? What nutrients are linked to malnutrition in the U.S. and globally? This foundational nutrition science course answers these and other nutrition related questions. Topics covered in the course include digestion and absorption of nutrients, macronutrients (carbohydrates, protein, and fats), micronutrients (water-soluble and fat-soluble vitamins, minerals), macronutrient metabolism, water and electrolytes, chronic disease and nutrition, lifecycle nutrition. This is a required course for the MPH 65 Nutrition students and recommended for nutrition doctoral students without prior courses in nutrition. The course is open to students from other departments and programs with an interest in nutrition.

Nutrition 201 Section: 1

Introduction to Nutrition in Public Health (190911)

Josiemer Mattei

Shilpa Bhupathiraju

2020 Fall (2.5 Credits) **Schedule:** TR 0201 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 24

This course will provide an overview of current topics in nutrition within the context of public health. We will explore concepts in dietary assessment and epidemiology, the role of nutrition on common physical and mental health conditions, global nutrition, public health and community nutrition, agriculture and food policy, nutrition communication, diet in special populations, and other topics. The course will consist of lectures and in-class discussion of case studies or articles guided by experts in the topics, with active contribution from students.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | NUT PHS & MPH65

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: NUT 200 Pre-Requisite**

Additional Course Attributes:

Attribute	Value(s)

Analysis of Country-Level Data (190917)

Anuraj Shankar

2017 Summer (2.5 Credits) **Schedule:** MWF 1030 AM - 0120 PM

Instructor Permissions: None **Enrollment Cap:** 16

Students will learn core skills in the analysis and interpretation of nutrition and health program data from low income countries. They will learn how to identify international and country-level databases from different sources that contain relevant health information, and how to assess data quality and link multiple diverse databases to enable integrated analyses. Students will learn to compile core health indicators for maternal and child health and nutrition, and for health program coverage and implementation. They will assess links between social factors and other determinants of health, and spatial and temporal trends in health and nutrition outcomes and their determinants. The course will emphasize how to utilize data to answer key policy and epidemiological questions related to program planning and evaluation, with a core focus being interpretation of findings and write reports or manuscripts for publication. Students will go through the complete hands-on process from data to analysis to manuscripts and reports.

Requirements: **HSPH: HSPH Degr + PHD Stu**

They will learn how to identify international and country-level databases from different sources that contain relevant health information, and how to assess data quality and link multiple diverse databases to enable integrated analyses. Students will learn to compile core health indicators for maternal and child health and nutrition, and for health program coverage and implementation. They will assess links between social factors and other determinants of health, and spatial and temporal trends in health and nutrition outcomes and their determinants. The course will emphasize how to utilize data to answer key policy and epidemiological questions related to program planning and evaluation, with a core focus being interpretation of findings and write reports or manuscripts for publication. Students will go through the complete hands-on process from data to analysis to manuscripts and reports.

Seminars in Food Science, Technology, and Sustainability (190919)

Guy Crosby

Gary Adamkiewicz

2017 Fall (2.5 Credits) **Schedule:** F 0345 PM - 0535 PM

Instructor Permissions: None **Enrollment Cap:** 30

The nutritional health of the public begins with food. There are two goals of this course: (1) To learn the basics of food science and technology, including food composition, chemistry, processing, and engineering; and (2) to understand how the broader food environment, including agricultural practices, food policy, and food trade, affects food availability and consumption. Through lectures, discussions, and group projects, students will be challenged to think critically about how the food supply impacts public health.

Course offered in odd years.

Legal and Public Health Perspectives on Food Policy (190921)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 12

This reading group is designed to bring students from diverse backgrounds together to discuss current issues in US food policy from multiple perspectives. Students will read three topic-based articles each week, and participate in a group discussion on the topic. The instructors will provide one foundational reading for each week of the course. Six student teams will be created, with one law and one public health student per team. The student teams will be responsible for choosing two readings and leading the

discussion on their designated week. Guests with deep, applied knowledge of the topic will also be invited to participate. Topics will include: the landscape of food policy and regulation in the US; the local/organic/sustainable foods movement; the U.S. dietary guidelines process, outcomes, and implications; U.S. food security programs (SNAP, WIC); school lunch and school lunch reform; and marketing foods to children.

The reading group will begin on Monday February 11th and conclude on Monday April 29th. Sessions take place every other Monday, and will alternate between the Harvard Law School campus and the Harvard School of Public Health Longwood campus. There will be an optional reading group orientation dinner held on Monday, January 28th, where students can meet the instructors and sign up for the session they will lead.

Registration is limited and will be by application only. Please submit a brief statement of interest to kdavison@hsph.harvard.edu by November 1.

Systems Science in Public Health (190922)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Obesity and chronic "non-communicable" diseases present complex problems not easily solved by working in single disciplines, whether they focus on cells, individuals, or populations. They result from multi-directional interactions among several levels of environmental influences along with biological susceptibility. These interactions may change across periods of the life course and they may feed on each other to maintain high rates of morbidity.

Systems science approaches such as agent-based modeling, system dynamics, and network analysis are potentially powerful tools to identify the most potent modifiable etiologic factors and most efficient levers for implementation of interventions.

This one-week Winter Session course is designed to introduce students to these disciplines, which are being imported into public health from engineering, management, evolutionary and systems biology, and social sciences. At the end of the course, students should be sufficiently conversant in the principles and methods to read the applicable literature and collaborate with computational modelers. Specialized software is required for the course.

Meir Stampfer

Aviva Musicus

2021 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course aims to provide practical skills necessary for translating nutrition science research into public health programs and policies. It seeks to answer the question, how can we best use nutrtion research to enhance public health. It is designed for Nutrition MPH students, for whom it is a required course; other interested students are welcome. Key topics include: learning to evaluate the scientific literature on human nutrition; learning how nutrition policies and programs are formulated, proposed, adopted, and implemented; and exploring levers of nutrition-related behavioral change. The class includes student presentations on a topic of choice within any of these key areas.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH65 NUT

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Nutrition Communication in Practice (213245)

Sheila Isanaka

Vasanti Malik

2021 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course is designed to provide students with the practical skills to effectively communicate research findings in academic and non-academic settings, using a variety of academic and nonacademic communication platforms among diverse audiences and stakeholders. Key topics include: how to prepare a scientific manuscript for publication; how to design and critique a scientific poster; how to frame and deliver an academic talk; and how to prepare non-academic media communications including media interviews, podcasts, op-eds, and social media. Students will select one topic of their choice to which they will apply the various communication platforms presented throughout the course. This course is required for all MPH-65 Nutrition students and will support their practicum outputs through enhancing writing and presentation skills, however, interested students from other programs are welcome to enroll.

Global Nutrition (190925)

Christopher Sudfeld

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

Malnutrition is the leading cause of death and disability worldwide, and is a major impediment to population health and economic development. Under-nutrition has dominated the health profile of developing countries, within a vicious cycle of poverty, under-nutrition, and infectious diseases. However, economic development, urbanization, and associated changes in diet and lifestyle patterns have contributed to the rapid emergence of chronic health conditions in these regions, including obesity, diabetes mellitus, and cardiovascular disease.

The specific course objects are to enable students to:

1. **Understand the role of nutrition in health and human development in resource-poor and enveloped settings**

2. **Apply the acquired knowledge in clinical care, field programs, and research**
3. **Critically review scientific literature and program experience on nutrition in relation to prevention, care, and treatment and draw appropriate conclusions**
4. **Use the knowledge obtained for a career in learning in nutrition**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Malnutrition is the leading cause of death and disability worldwide, and is a major impediment to population health and economic development. Under-nutrition has dominated the health profile of developing countries, within a vicious cycle of poverty, under-nutrition, and infectious diseases. However, economic development, urbanization, and associated changes in diet and lifestyle patterns have contributed to the rapid emergence of chronic health conditions in these regions, including obesity, diabetes mellitus, and cardiovascular disease.

The specific course objects are to enable students to:

1. **Understand the role of nutrition in health and human development in resource-poor and enveloped settings**
2. **Apply the acquired knowledge in clinical care, field programs, and research**
3. **Critically review scientific literature and program experience on nutrition in relation to prevention, care, and treatment and draw appropriate conclusions**
4. **Use the knowledge obtained for a career in learning in nutrition**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Malnutrition is the leading cause of death and disability worldwide, and is a major impediment to population health and economic development. Under-nutrition has dominated the health profile of developing countries, within a vicious cycle of poverty, under-nutrition, and infectious diseases. However, economic development, urbanization, and associated changes in diet and lifestyle patterns have contributed to the rapid emergence of chronic health conditions in these regions, including obesity, diabetes mellitus, and cardiovascular disease.

This course will provide a comprehensive overview of the state of the science in global health nutrition. It will discuss major nutrition-related problems seen in developed and developing countries, ranging from micro- and macronutrient deficiencies to diet-related chronic diseases. Building on the understanding of these problems, the course will discuss types of study design to further advance knowledge as well as programmatic solutions.

Course note: Graduate training in a health-related field and introductory knowledge of epidemiology is recommended.

Designing and Evaluating Behavioral Interventions Targeting Diet and Physical Activity (190929)

Kirsten Davison

2016 Fall (2.5 Credits) **Schedule:** T 0130 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course outlines methods used to design, evaluate, and disseminate diet and physical activity behavioral interventions in real world settings. This course will review the lifecycle of program planning and evaluation, community needs assessments, the role of program theory, process evaluations, valid and practical measures of diet and physical activity, experimental and pragmatic approaches to impact evaluation, and strategies to disseminate evidence-based programs. Across these topics, the need to balance scientific rigor and the pragmatics of real world settings will be carefully considered to ensure that students have a thorough understanding of the fundamentals of program planning and evaluation and can apply these skills in a flexible and adaptive manner in a range of social, political, and economic contexts.

A combination of lecture and discussion format will be used during classes. Several guest speakers will present to the class to provide a range of perspectives on strategies to design and evaluate effective diet and physical activity interventions in a variety of settings.

Prerequisites: Graduate standing.

Prior graduate coursework recommended in one or more of the following areas: nutrition, exercise science, social and behavioral sciences, or community health.

Scientific Writing in Nutrition and Epidemiology (213278)

Meir Stampfer

2021 Spring (2.5 Credits) **Schedule:** T 0200 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 10

This course is designed for advanced students who are beginning to work on a paper for publication. The course will cover creation and organization of scientific papers, presentation of data in graphical and tabular forms, and style. Each section of a paper will be discussed extensively. The goal is for each student to have a manuscript ready for submission to a peer review journal at the end of the course. Course activities: Principles of scientific writing will be taught. Students will work on their papers independently, under the overall supervision of their own faculty advisors. Each student will critique the papers of classmates. The instructor will guide the discussion and use the paper to make additional points of constructive criticism, which will serve to illustrate the principles. Guidelines for journals and co-author criteria will be discussed. Approach to revisions based on reviewers' comments will be covered. This course is designed primarily for Nutrition and Epidemiology doctoral and masters students; other interested students are welcome if space permits.

Dietary intervention trials – study design and novel technologies (216277)

Iris Shai

Frank Hu

Jun Li

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0800 AM - 0944 AM
MTWRF 1130 AM - 1259 PM

Instructor Permissions: None **Enrollment Cap:** 13

Aim of the course: Developing knowledge and skills for designing, analyzing, and interpreting dietary intervention trials.

Dietary intervention trials have played a key role in establishing the causality between diet or nutrient intake and health outcomes and in the determination of dietary requirements and levels of supplementations to achieve specific outcomes. In this course, we will discuss the concepts and elements of nutritional RCTs, how to design, conduct, analyze, and interpret nutritional RCTs through case studies, and will address novel challenges/opportunities in nutritional RCTs. New technologies such as nutritional omics and the concept of personal or precision nutrition will be discussed. Students will need to read the relevant scientific literature prior to the lectures. Attendance and participation in lectures are required. Upon successful completion of the course, students will have a better understanding on how to plan and design a nutritional RCT and will be familiar with different types of outcome measurements and different analytical approaches.

Independent Study (190930)

Christopher Golden

2021 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Independent study work can include laboratory studies, projects in applied nutrition, library research, or the following special topic listed under NUT 301.

NUT Research Practicum Dvlpmnt (190933)

Instructor TBD

2012 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Students will receive 1.25 for individually planning their Public Health Nutrition practicum over a period of up to 16 weeks. Instructors will provide individual supervision of this process. This will usually take place during the fall of the second year of doctoral study but could take place earlier, depending upon prior experience and the student's individual program of study.

Applied Research Practicum NUT (190934)

Teresa Fung

2017 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

In addition to formal thesis research projects, doctoral students in Public Health Nutrition are required to

complete a research practicum in a U.S. or international public health setting involving supervised field work. Graduate students who are not formally enrolled in the Public Health Nutrition doctoral concentration but who desire nutrition research experience in an applied setting may take the course after special consultation with the instructor(s). The practicum is completed individually by students under the supervision of a faculty member. It will be pass/fail and worth a minimum of 5 credits. The practicum will cultivate field research skills, leadership skills, integrate and strengthen technical knowledge and quantitative skills, and enhance oral and written communication skills. It will also cultivate the capacity to work with others in a substantial project that responds effectively and creatively to the needs of an organization. Projects may be in the areas of nutrition/physical activity program planning and evaluation, policy development, research methods, project management, mass media communication, information dissemination and intervention. The practicum includes a research component in the form of data collection and analysis, or outcome evaluation.
